About This Guide

Audience and Purpose

This guide is written for application developers who want to use the CyberSource Simple Order API to integrate Masterpass into their order management system.

Implementing CyberSource services requires software development skills. You must write code that uses the API request and reply fields to integrate the CyberSource services into your existing order management system.

Masterpass Using the Simple Order API  |  April 2018

CHAPTER 1

Integrating Masterpass into Your System

Requirements

- You must have a CyberSource account. If you do not already have a CyberSource account, contact your local CyberSource sales representative to inquire about Masterpass eligibility and enrollment:
  http://www.cybersource.com/locations/

- You must contact CyberSource Customer Support to have your account configured for Masterpass.

- To get started using Masterpass, use the CyberSource Business Center.

- When you use the Simple Order API in XML format, you must use version 1.143 or later of the XML schema to implement Masterpass.

- You must be familiar with the CyberSource credit card services as described in Credit Card Services Using the Simple Order API.

- If you are including payer authentication in your Masterpass implementation, you must be familiar with the CyberSource payer authentication services as described in Payer Authentication Using the Simple Order API.

Warning
You must disable the CyberSource Address Verification System (AVS) checks. To disable AVS checks for authorization requests, contact CyberSource technical support. You have the option of obtaining the customer’s first name and last name during your web site’s checkout process. You can provide the customer’s first name and last name in the authorization request.

Supported Countries

For a list of the countries and associated currencies from which Masterpass payments are accepted, refer to Appendix D, “Supported Countries and Payment Currencies,” on page 28.
Using the CyberSource API to Access Masterpass

The CyberSource Masterpass functionality enables the customer to pass Masterpass transaction identifiers instead of payment information. When you request an authorization, pass the following parameters:

- wallet_orderID: set the value for this field to contain the Masterpass OAuthToken received in the Masterpass button response payload (see http://oauth.net). Upon completion of a Masterpass checkout flow, the Masterpass platform sends its response to the callback URL defined in your profile. This value is passed in either the query parameter or the response.

- wallet_merchantReferenceID: this field contains the unique cart ID value you use in your code to initiate the Masterpass button. For more information about the Masterpass cart ID, see http://developer.mastercard.com.

Payment Flow

Figure 1 Masterpass Payment Flow

1. Your website integrates directly with Masterpass and displays a Masterpass button you display on your checkout page. This button captures the Masterpass callback response.

2. When a customer chooses the Masterpass button at checkout, it interacts with the Masterpass wallet service and provides a response payload containing unique Masterpass IDs to the redirect URL.
3 Masterpass passes the transaction ID and checkout data to your order management system.

4 **Optional:** you request the get Masterpass data service, which retrieves Masterpass payment data. You can display the retrieved data to help the customer confirm the purchase. See "Getting Masterpass Data," page 16.

The retrieved data does not include the payment account number (PAN) unless your Masterpass account is configured to receive the PAN. During Masterpass enrollment, you can choose to receive PAN data when you request the get Masterpass data service. You must agree to handle the PAN data in compliance with the Payment Card Industry Data Security Standard (PCI-DSS).

5 You send a credit card authorization request to CyberSource. Instead of including payment information in the authorization request, you include the Masterpass wallet order ID and wallet merchant reference ID. The wallet order ID is a reply field contained in the response. The merchant reference ID is defined when a customer activates the Masterpass button.

6 At various times in the transaction cycle, you can notify the customer about the transaction status.

**How Masterpass and CyberSource Work Together**

The Masterpass onboarding process is integrated into the CyberSource Business Center, which makes it easy for you to accept Masterpass as a payment option. CyberSource provides the following services to assist with your Masterpass integration:

- **get Masterpass data:** this service retrieves Masterpass data using Masterpass identifiers included in their Masterpass button response payload in the form of a callback URL. The callback URL contains parameters that you need to include in the authorization request (see https://developer.mastercard.com/page/masterpass-checkout-faqs). This service retrieves data to display to the customer during checkout.

- **Authorization:** this service enables you to send an authorization request to your processor using Masterpass transaction identifiers.

The following sequence outlines how Masterpass and CyberSource work together.

1 A cardholder uses your web site to place an order and, using a button on your checkout page, selects Masterpass as the payment option. For details about this step, contact your CyberSource sales representative.

2 The cardholder logs in to Masterpass and chooses a form of payment and a shipping location.
3 **Optional:** Masterpass performs 3DS (Mastercard SecureCode) to authenticate the cardholder.

4 Masterpass responds with the transaction ID (see wallet_xid, page 21).

5 **Optional:** you request the get Masterpass data service. See "Getting Masterpass Data," page 16.

---

**If you use this option, you cannot request the CyberSource authorization service as specified in Step 6.**

---

6 You request the CyberSource authorization service providing the Masterpass transaction ID instead of payment credentials. See Authorization with Masterpass Data, page 16.

7 CyberSource obtains the payment data directly from Masterpass and authorizes the transaction.

---

**Enrolling in Masterpass**

You must log in to the Business Center and enroll in the CyberSource production environment to integrate Masterpass into your CyberSource account. If the sign-up status pane appears to the right, enroll and integrate Masterpass with your CyberSource account. If you do not see a sign-up status pane, contact your local CyberSource sales representative.

---

**To enroll and integrate Masterpass with your CyberSource account:**

**Step 1** Log in to the Business Center.

**Step 2** Under Account Management in the left navigation panel, choose Digital Payment Solutions.
**Step 3**  Click **Configure**. The Masterpass sign-up window appears.

**Figure 2  Masterpass Sign-Up Window**

**Step 4**  In the Masterpass Sign Up window, review and accept the Masterpass operating rules:

a  Click **Masterpass Operating Rules**. The Business Center displays the Masterpass operating rules agreement.

b  Review the agreement.

c  Check the confirmation check box to confirm that you have read the merchant service agreement and agree to abide by its terms.

d  Click **Agree and Create Account**.

CyberSource creates your Masterpass account. The Business Center displays the Masterpass account page, which displays your Masterpass checkout ID and the PAN data settings selection for your Masterpass account.

---

**Warning**

You must keep your own copy of the Masterpass checkout ID in a safe place. You are responsible for maintaining adequate security and control of your Masterpass checkout ID.
Chapter 1  Integrating Masterpass into Your System

The Business Center displays the next section of the Masterpass Sign Up window.

Figure 3  Merchant Configuration

Step 5  In the Masterpass Sign Up window, provide your configuration information:

a  Fill in the Profile fields with information about your business:
   - Profile Name: name for your Masterpass account
   - Doing Business As: your business name
   - Profile URL: your web site URL
   - Country Code: country code for your phone number
   - Phone Number: phone number for your business’ headquarters
b  Fill in the **Address** fields with information about your business location:
- Street Address 1: building number and the street name
- Street Address 2: additional street address information such as a suite number
- City
- State
- Postal Code
- Country

c  In the 3D Secure Advance Authentication section, check the **Enable** check box if you have 3D Secure credentials that you want to configure for your Masterpass account. The Business Center displays the following fields for you to fill:
- **Acquirer Id**: ID number for your acquirer
- **Acquirer Name**: name of your acquirer
- **Assigned Merchant Id**: merchant ID that your acquirer assigned to your business
- **Acquirer Password**: password from your acquirer for setting up 3D secure
- **Advanced Authorization Card Brand**: card type supported by 3D secure

d  Fill in the **Checkout Brand Details** fields:
- **Brand Name**: the merchant name that will be used for reporting purposes
- **Display Name**: your business name, which will be displayed to Masterpass customers during checkout
- **Production URL**: URL to which Masterpass redirects the customer’s browser when checkout is complete
- **Sandbox URL**: URL to which Masterpass redirects the customer’s browser when checkout is complete during sandbox integrations

e  Configure the **PAN data settings**:
- If you do not check the Include Customer PAN Data check box, CyberSource manages the PAN data on your behalf. If you decide to change your PAN configuration in the future, you can change the configuration on the Masterpass account page after Masterpass is enabled.
  - If you check the Include Customer PAN Data check box, customer PAN data is included in the get Masterpass data reply. By selecting this option you are indicating that your business is PCI-DSS compliant and that you agree to be responsible for the safe handling, storage, and transmission of PAN data.
Click **Enroll Merchant** to complete the setup of your Masterpass account. The Business Center displays your enrollment details.

**Step 6** Verify your Masterpass enrollment details:

- Copy the checkout ID. Use this value to initiate the Masterpass button on your website.
- To edit any of your enrollment details, click **Edit Configuration**.
Chapter 1  Integrating Masterpass into Your System

Getting Masterpass Data

The get Masterpass data service enables you to retrieve the Masterpass data (except the PAN, unless your account is configured to receive it). You can display the retrieved data to help the customer confirm the purchase.

To create a get Masterpass data service request:

Step 1  Set the `getMasterpassDataService_run` field to `true`.

Step 2  Do not include any other CyberSource services in the request.

Step 3  Include the following required fields in the request:

- `getMasterpassDataService_run`
- `merchantID`
- `merchantReferenceCode`
- `paymentSolution`
- `wallet_orderID`
- `wallet_merchantReferenceID`

See Appendix A, "API Fields," on page 18 for:

- Descriptions of these required request fields
- Descriptions of all reply fields

Authorization with Masterpass Data

When you request the CyberSource authorization service, include Masterpass identifiers instead of payment information.

The following fields are required:

- `getMasterpassDataService_run`—set to `true`
- `merchantID`
- `merchantReferenceCode`
- `paymentSolution`—set to `005`
- `purchaseTotals_currency`
- `purchaseTotals_grandTotalAmount`
- `wallet_merchantReferenceID`
- `wallet_orderID`
The following field values are sourced from the Masterpass payment request.
- wallet_orderID—taken from the Masterpass OAuthToken
- wallet_merchantReferenceID—taken from the Masterpass cart ID

For descriptions of request fields, see "API Fields," page 18.

For descriptions of request fields unavailable in this guide, see Credit Card Services Using the Simple Order API.

**Using 3D Secure with Masterpass**

To integrate payer authentication using the Simple Order API, see:
- Credit Card Services Using the Simple Order API
- Payer Authentication Using the Simple Order API

**Using Decision Manager with Masterpass**

While the Masterpass response contains many of the fields necessary to run Decision Manager, the Masterpass response does not contain the following essential Decision Manager fields:
- Device fingerprint
- True IP address

You must capture these fields independently.

**Card on File**

Masterpass does not automatically support card-on-file transactions. To implement a card-on-file solution with Masterpass, additional review and sign-off is required. Contact your CyberSource representative to initiate a Masterpass review for authorization to proceed with a card-on-file solution.
API Fields

Formatting Restrictions

Unless otherwise noted, all field names are case sensitive and all fields accept special characters such as @, #, and %.

Note

The values of the item_#_ fields must not contain carets (^) or colons (:)

because these characters are reserved for use by the CyberSource services.

Values for request-level and item-level fields must not contain new lines or carriage returns. However, they can contain embedded spaces and any other printable characters. CyberSource removes all leading and trailing spaces.

Data Type Definitions

For more information about these data types, see the World Wide Web Consortium (W3C) XML Schema Part 2: Datatypes Second Edition.

</tbody>
</table>
### Appendix A  API Fields

#### wallet_authenticationMethod
Method used by the wallet provider to authenticate the cardholder. Possible values:
- **3DS**: The cardholder was authenticated using 3D Secure.
- **No authentication**: The cardholder was not authenticated.

Data Type: String (17)

#### wallet_cardEnrollmentMethod
Enrollment method used to add the card to the wallet. Possible values:
- **3DS Manual**: Cardholder enrolled the card manually. 3D Secure authentication was performed during enrollment.
- **Direct Provisioned**: Issuer enrolled the card.
- **Manual**: Cardholder enrolled the card manually. 3D Secure authentication was not performed during enrollment.
- **NFC Tap**: Cardholder enrolled the card by tapping the card at an NFC terminal. (This value is not supported by CyberSource at this time).

Data Type: String (25)

#### wallet_eciRaw
Raw e-commerce indicator (ECI). Possible values:
- **01**: Mastercard: incomplete authentication.
- **02**: Mastercard: successful authentication
- **05**: Visa, American Express, JCB, and Diners Club: successful authentication.
- **06**: Visa, American Express, JCB, and Diners Club: authentication attempted.

Data Type: String (2)

#### wallet_paresStatus
Payer authentication response status. Possible values:
- **A**: Proof of authentication attempt was generated.
- **N**: Customer failed or canceled authentication. Transaction denied.
- **U**: Authentication not completed regardless of the reason.
- **Y**: Customer was successfully authenticated.

Data Type: String (1)

#### wallet_type
Type of Masterpass wallet. Mastercard mandates to send this filed in the authorization request.

Data Type: String (3)

#### wallet_userPhone
Cardholder phone number associated with the wallet.

*Note* This number might not be the same as the phone number associated with the card account.

Data Type: String (15)

#### wallet_veresEnrolled
Verification response enrollment status. Possible values:
- **N**: Card is not enrolled.
- **U**: Unable to determine whether the card is enrolled.
- **Y**: Card is enrolled.

Data Type: String (1)

#### wallet_xid
Transaction identifier (XID).

Data Type: String (255)

    <merchantReferenceID>67236732672673</merchantReferenceID>
  </wallet>
</requestMessage>
```

Example 8  Masterpass Authorization Reply

```xml
<replyMessage xmlns:c="urn:schemas-cybersource-com:transaction-data-1.143">
  <merchantReferenceCode>123456</merchantReferenceCode>
  <requestID>4068437426340172492292</requestID>
  <decision>ACCEPT</decision>
  <reasonCode>100</reasonCode>
  <purchaseTotals>
    <currency>USD</currency>
  </purchaseTotals>
  <ccAuthReply>
    <reasonCode>100</reasonCode>
    <amount>25.00</amount>
    <authorizationCode>831000</authorizationCode>
    <avsCode>Y</avsCode>
    <avsCodeRaw>Y</avsCodeRaw>
    <processorResponse>00</processorResponse>
  </ccAuthReply>
</replyMessage>
```
Because CyberSource can add reply fields and reason codes at any time:

- You must parse the reply data according to the names of the fields instead of the field order in the reply. For more information about parsing reply fields, see the documentation for your client.
- Your error handler should be able to process new reason codes without problems.
- Your error handler should use the decision field to determine the result if it receives a reason code that it does not recognize.

Table 4  Reason Codes

<table>
<thead>
<tr>
<th>Reason Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>100</td>
<td>Successful transaction.</td>
</tr>
<tr>
<td>150</td>
<td>General system failure.</td>
</tr>
</tbody>
</table>

See the documentation for your CyberSource client for information about handling retries in the case of system errors.
## Supported Countries and Payment Currencies

The following table identifies the countries and associated currencies from which payments are accepted:

<table>
<thead>
<tr>
<th>Country</th>
<th>Currency</th>
<th>Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Argentina</td>
<td>Argentine peso</td>
<td>ARS</td>
</tr>
<tr>
<td>Australia</td>
<td>Australian dollar</td>
<td>AUD</td>
</tr>
<tr>
<td>Brazil</td>
<td>Brazilian real</td>
<td>BRL</td>
</tr>
<tr>
<td>Canada</td>
<td>Canadian dollar</td>
<td>CAD</td>
</tr>
<tr>
<td>Chile</td>
<td>Chilean peso</td>
<td>CLP</td>
</tr>
<tr>
<td>China</td>
<td>Chinese yuan renminbi</td>
<td>CNY</td>
</tr>
<tr>
<td>Colombia</td>
