# About This Guide

## Audience and Purpose

---

This guide is written for application developers who want to use the Simple Order API to integrate payment card processing with card-present data into their order management system. *Credit Card Services for CyberSource through VisaNet Using the Simple Order API* provides the basic information about payment card processing. This supplement provides information about additional requirements and options for card-present transactions.

Implementing the credit card services requires software development skills. You must write code that uses the API request and reply fields to integrate the credit card services into your existing order management system.

Information in this guide about Europay, Mastercard, and Visa (EMV) applies to payment card processing and PIN debit processing. All other information in this guide applies only to payment card processing.

## Conventions

---

The following special statement is used in this document:

An *Important* statement contains information essential to successfully completing a task or learning a concept.

---

The following text conventions are used in this document:

**Table 1 Text Conventions**

Convention	Meaning
<b>Bold</b>	<ul style="list-style-type: none"> <li>■ API field names</li> <li>■ API service names</li> <li>■ Graphical user interface elements that you must act upon</li> </ul>
Screen text	<ul style="list-style-type: none"> <li>■ XML elements</li> <li>■ Code examples</li> <li>■ Values for API fields; for example: Set the <b>ccAuthService_run</b> field to <code>true</code>.</li> </ul>

## Related Documentation

- *Getting Started with CyberSource Advanced for the Simple Order API* ([PDF](#) | [HTML](#)) describes how to get started using the Simple Order API.

# Introduction to Card-Present Transactions

This supplement to *Credit Card Services for CyberSource through VisaNet Using the Simple Order API* describes card-present processing.

Information in this guide about Europay, Mastercard, and Visa (EMV) applies to payment card processing and PIN debit processing. All other information in this guide applies only to payment card processing.

## Prerequisites

---

Before you start your implementation:

- Contact your acquirer to find out whether you are allowed to process card-present transactions.
- Find out from your acquirer and customer support whether you must have a separate Cybersource merchant ID for your card-present transactions.
- Contact customer support to have your account configured to process card-present transactions.
- Make sure that you are familiar with the Simple Order API for processing e-commerce and mail order/telephone order (MOTO) transactions as described in *Credit Card Services for CyberSource through VisaNet Using the Simple Order API*. Use the fields in this guide in addition to the fields in *Credit Card Services for CyberSource through VisaNet Using the Simple Order API*.

# Optional Features

## Authorizations with Payment Network Tokens

---

You can request a payment card authorization with a payment network token instead of a primary account number (PAN). For information about adding this functionality to an order management system that already uses credit card services, see [Authorizations with Payment Network Tokens Using the Simple Order API](#).

## Dynamic Currency Conversion (DCC)

---

For information about dynamic currency conversion, see [Credit Card Services Using the Simple Order API](#).

## Europay, Mastercard, Visa (EMV)

---

Information in this guide about EMV applies to payment card processing and PIN debit processing. All other information in this guide applies only to payment card processing.

### Services:

- Authorization
- Authorization reversal
- Capture
- Credit
- PIN debit credit
- PIN debit purchase
- PIN debit reversal

**Card Types for Contact EMV Transactions:**

- American Express
- Mastercard
- Visa

**Card Types for Contactless EMV Transactions:**

- American Express ExpressPay
- Mastercard PayPass
- Visa payWave

EMV is a global standard for exchanging information between chip cards and POS terminals. A chip card is a credit or debit card with an embedded microchip. A chip card also has a magnetic stripe on the back of the card, which can be used for a back-up transaction when the card's chip cannot be read. The EMV standards define the protocols for all levels of transmission between chip cards and chip card processing devices: physical, electrical, data, and application.

## EMV Cards and Cardholder Verification Methods (CVMs)

Most EMV cards are chip-and-PIN cards. For these cards, a PIN is the preferred CVM. Most chip-and-PIN cards allow a cardholder to provide a signature as a back-up option. Other EMV cards are chip-and-signature cards. For these cards, a signature is the preferred CVM, and a PIN can be used as a back-up option.

Chip-and-signature cards are more widespread in the U.S. Chip-and-PIN cards are more widespread outside the U.S.

## EMV Transactions

When you use the Simple Order API in XML format, you must use version 1.86 or later of the XML schema to implement EMV.

EMV transactions are more secure from fraud than are magnetic stripe transactions, which require a visual inspection of the card. Chip-and-PIN cards are more secure from fraud than chip-and-signature cards. When an EMV chip card is used in a POS environment, it generates a cryptogram that changes with each transaction. This dynamic authentication provides an extra layer of security for POS transactions.

For an EMV transaction, use the fields documented in ["EMV Request Fields," page 18](#). The following fields and values are specifically for EMV:

- Request fields: see ["EMV Request Fields," page 18](#).
- Reply fields: see ["Reply Fields," page 41](#)

- Values for **pos\_entryMode**:
  - `contact`: Read from direct contact with chip card.
  - `contactless`: Read from a contactless interface using chip data.
  - `msd`: Read from a contactless interface using magnetic stripe data (MSD).
- Values for **pos\_terminalCapability**:
  - 4: Terminal can read chip cards.
  - 5: Terminal can read contactless chip cards.

## Mass Transit Transactions

---

### Service:

- Authorization

### Card types:

- Mastercard
- Visa

The following transaction types are supported for mass transit transactions (MTTs):

- Contactless zero amount authorizations
- Contactless deferred authorizations
- Cardholder-initiated MOTO and e-commerce debt recovery
- Merchant-initiated MOTO debt recovery

For an MTT, you can capture a declined authorization when the amount is less than the regional chargeback threshold.

### Create an authorization request for an MTT:

---

- Step 1** Include the `ccAuthService_industryDatatype` field in the authorization request. Set the value for this field to `transit`.
- Step 2** Include fields required for an authorization request.
- Step 3** Include any of the following optional MTT request fields:
- `ccAuthService_aggregatedAuthIndicator`
  - `ccAuthService_captureDate`
  - `ccAuthService_debtRecoveryIndicator`
  - `ccAuthService_deferredAuthIndicator`
  - `ccAuthService_transportationMode`

For descriptions of these fields, see ["General Card-Present Request Fields," page 23](#).

---

## PCI P2P Encryption with Bluefin

---

### Services:

- Authorization
- Stand-alone credit

### Device:

- ID TECH SREDKey PCI Key Pad with Encrypted MagStripe Reader

You must use a device that meets the following requirements:

- Is provided by Bluefin Payment Systems unless otherwise agreed to by Cybersource and Bluefin
- Is injected with encryption keys for the Cybersource payment card industry (PCI) point-to-point encryption (P2PE) solution, which is powered by Bluefin

You need to have separate devices for sandbox testing and production.

---

## Requirements

You must have a contractual relationship with Bluefin Payment Systems for PCI-validated P2PE services, which include:

- Key injection
- Decryption, which is performed by Cybersource
- Hardware

You must manage your Bluefin devices through the Bluefin P2PE Manager portal, which enables you to:

- Track device shipments
- Deploy or terminate devices
- Manage users and administrators
- View P2PE transactions
- Download and export reports for PCI compliance

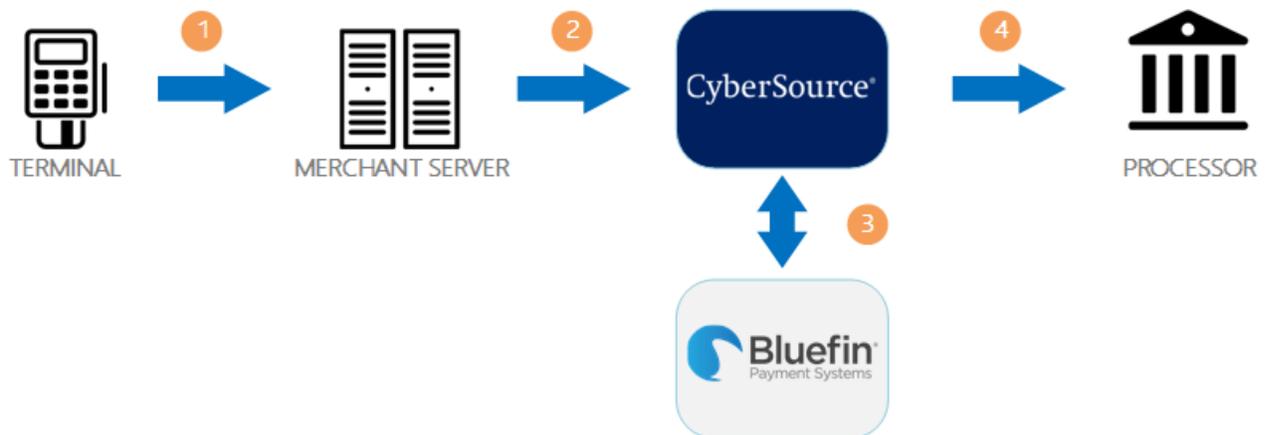

Do not use terminal configuration #3 or #5, which causes the device to prompt you for the cardholder's street address. To include the cardholder's street address in your order management system, include the API field for the billing street address in your request.

## Overview

The PCI P2PE solution, which is powered by Bluefin, does the following:

- Safeguards card data at the terminal hardware level
- Reduces your PCI burden by minimizing the number of PCI audit questions to which you must respond
- Provides device life cycle management through the Bluefin P2PE Manager portal
- Supports magnetic stripe read (MSR) and manual key entry

The following diagram illustrates the steps in a transaction that uses encryption:

- 1 When a customer swipes a card through the Bluefin device, the device encrypts the card details at the hardware level and in accordance with PCI P2PE standards. The device sends the encrypted payload to your order management system.
- 2 Your order management system sends the encrypted payload to Cybersource in an authorization request or stand-alone credit request.
- 3 Cybersource sends the encrypted payload to Bluefin to be decrypted and parsed. Bluefin sends the decrypted data to Cybersource over a secure channel.
- 4 Cybersource sends the decrypted data and additional transaction information to your processor.

## Creating a Request for an Authorization or Stand-Alone Credit That Uses Bluefin PCI P2PE

When using the Simple Order API in XML format, you must use version 1.132 or later of the XML schema to use Bluefin P2PE encryption.

For examples that use Bluefin PCI P2PE, see:

- Name-value pair examples: ["Authorization Using Bluefin PCI P2PE," page 52](#)
- XML examples: ["Authorization Using Bluefin PCI P2PE," page 66](#)

**Step 1** Include the following fields in the request:

- encryptedPayment\_data
- encryptedPayment\_descriptor

These fields are described in ["P2PE Request Fields," page 41](#).

**Step 2** Include general card-present request fields in the request as needed. See ["General Card-Present Request Fields," page 23](#).

**Step 3** Follow instructions in [Credit Card Services Using the Simple Order API](#) for creating an authorization request or stand-alone credit request.

Most of the fields that are normally required for an authorization request or stand-alone credit request are not required for a Bluefin PCI P2PE request because the encrypted data includes most of the required data.

## POS Transactions in Brazil

### Services:

- Authorization
- Capture
- Credit

The `invoiceHeader_merchantDescriptorPostalCode` field is required for POS transactions in Brazil. For a description of this field, see the information about merchant descriptors in [Merchant Descriptors Using the Simple Order API](#).

## Relaxed Requirements for Address Data and Expiration Date

---

To enable relaxed requirements for address data and expiration date, contact Cybersource Customer Support to have your account configured for this feature. For details about relaxed requirements, see the [Relaxed Requirements for Address Data and Expiration Date page](#).

# API Fields

**Important**

This guide is a supplement to the credit card guide and PIN debit guide. This supplement provides information about features and fields that are used in addition to the information that is in the credit card guide and PIN debit guide.

When you send a request that includes card-present data, you must include the basic fields required for every credit card or PIN debit request. For information about these basic fields, see *Credit Card Services for CyberSource through VisaNet Using the Simple Order API* and *PIN Debit Processing for CyberSource through VisaNet Using the Simple Order API*.

## XML Schema Versions

For general information about XML schema versions, see [Getting Started with CyberSource Advanced for the Simple Order API](#). For clear-text card-present transactions, use Version 1.69 or later of the Simple Order API schema.

## Formatting Restrictions

Unless otherwise noted, all field names are case sensitive and all fields accept special characters such as @, #, and %.

The values of the **item\_#\_** fields must not contain carets (^) or colons (:) because these characters are reserved for use by the Cybersource services.

Values for request-level and item-level fields must not contain new lines or carriage returns. However, they can contain embedded spaces and any other printable characters. Cybersource removes all leading and trailing spaces.

## Data Type Definitions

For more information about these data types, see the [World Wide Web Consortium \(W3C\) XML Schema Part 2: Datatypes Second Edition](#).

**Table 2 Data Type Definitions**

Data Type	Description
Date and time	Format is YYYY-MM-DDThh:mm:ssZ, where: <ul style="list-style-type: none"> <li>■ T separates the date and the time</li> <li>■ Z indicates Coordinated Universal Time (UTC), also known as Greenwich Mean Time (GMT)</li> </ul> <p><b>Example</b> 2020-01-11T22:47:57Z equals January 11, 2020, at 22:47:57 (10:47:57 p.m.).</p>
Integer	Whole number {..., -3, -2, -1, 0, 1, 2, 3, ...}
String	Sequence of letters, numbers, spaces, and special characters

## EMV Request Fields

**Table 3 EMV Request Fields**

Field	Description	Used By: Required (R) or Optional (O)	Data Type & Length
emvRequest_ cardSequenceNumber	Number assigned to a specific card when two or more cards are associated with the same primary account number. This value enables issuers to distinguish among multiple cards that are linked to the same account. This value can also act as a tracking tool when the issuer reissues cards. When this value is available, it is provided by the chip reader. When the chip reader does not provide this value, do not include this field in your request. See " <a href="#">Europay, Mastercard, Visa (EMV)</a> ," page 10.	ccAuthService (O) pinDebitCreditService (O) pinDebitPurchase Service (O)	String with numbers only (3)

<sup>1</sup> The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Table 3 EMV Request Fields (Continued)

Field	Description	Used By: Required (R) or Optional (O)	Data Type & Length
emvRequest_ combinedTags	<p>EMV data that is transmitted from the chip card to the issuer and from the issuer to the chip card. The EMV data is in the tag-length-value format and includes chip card tags, terminal tags, and transaction detail tags. See <a href="#">"Europay, Mastercard, Visa (EMV)," page 10</a>.</p> <p>For information about the individual tags, see the "Application Specification" section in the <i>EMV 4.3 Specifications</i>: <a href="http://emvco.com">http://emvco.com</a></p> <p><b>Important</b> The following tags contain sensitive information and must not be included in this field:</p> <ul style="list-style-type: none"> <li>■ 56: Track 1 equivalent data</li> <li>■ 57: Track 2 equivalent data</li> <li>■ 5A: Application PAN</li> <li>■ 5F20: Cardholder name</li> <li>■ 5F24: Application expiration date</li> <li>■ 99: Transaction PIN</li> <li>■ 9F0B: Cardholder name (extended)</li> <li>■ 9F1F: Track 1 discretionary data</li> <li>■ 9F20: Track 2 discretionary data</li> </ul> <p>For information about the individual tags, see the "Application Specification" section in the <i>EMV 4.3 Specifications</i>: <a href="http://emvco.com">http://emvco.com</a></p> <p>For captures, this field is required for contact EMV transactions. Otherwise, it is optional.</p> <p>For credits, this field is required for contact EMV stand-alone credits and contactless EMV stand-alone credits. Otherwise, it is optional.</p> <p><b>Important</b> For contact EMV captures, contact EMV stand-alone credits, and contactless EMV stand-alone credits, you must include the following tags in this field. For all other types of EMV transactions, the following tags are optional.</p> <ul style="list-style-type: none"> <li>■ 95: Terminal verification results</li> <li>■ 9F10: Issuer application data</li> <li>■ 9F26: Application cryptogram</li> </ul> <p>Information in this guide about EMV applies to payment card processing and PIN debit processing. 1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

## Clear Text Request Fields

**Table 4** Clear Text Request Fields

Field	Description	Used By: Required (R) or Optional (O)	Data Type & Length
pos_serviceCode	<p>Mastercard service code that is included in the track data. You can extract the service code from the track data and provide it in this API field.</p> <p>This field is supported only for Mastercard.</p>	ccAuthService (O)	String (3)
pos_trackData	<p>Card's track 1 and 2 data. This value consists of one of the following:</p> <ul style="list-style-type: none"> <li>■ Track 1 data</li> <li>■ Track 2 data</li> <li>■ Data for both tracks 1 and 2</li> </ul> <p><b>Example</b> %B41111111111111111111111111111111^SMITH/ JOHN ^1612101976110000868000000?;41 11111111111111111111=16121019761186800000?</p>	ccAuthService (R when <b>pos_entryMode</b> is contact, contactless, msd, or swiped; otherwise, not used.)	String (119)

## General Card-Present Request Fields

**Table 5** General Card-Present Request Fields

Field	Description	Used By: Required (R) or Optional (O)	Data Type & Length
billTo_postalCode	<p>Postal code for billing address. Postal code must consist of 5 to 9 digits.</p> <p>When the billing country is U.S., the 9-digit postal code must follow this format: [5 digits][dash][4 digits]</p> <p><b>Example</b> 12345-6789</p> <p>When the billing country is Canada, the 6-digit postal code must follow this format: [alpha][numeric][alpha][space][numeric][alpha][numeric]</p> <p><b>Example</b> A1B 2C3</p>	ccAuthService (O)	String (10)
card_accountNumber	Payment card number.	ccAuthService (R when keyed.)	String with numbers only (20)
card_cardType	<p>Type of card to authorize. Possible values:</p> <ul style="list-style-type: none"> <li>■ 001: Visa</li> <li>■ 002: Mastercard</li> <li>■ 003: American Express</li> <li>■ 004: Discover</li> <li>■ 005: Diners Club</li> <li>■ 007: JCB</li> </ul>	<p>ccAuthService (R for JCB. O for other card types.)</p> <p><b>Important</b> Cybersource strongly recommends that you send the card type even when it is optional for your processor and card type. Omitting the card type can cause the transaction to be processed with the wrong card type.</p>	String (3)

- 1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.
- 2 This field is optional when your Cybersource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 16. **Important** It is your responsibility to determine whether a field is required for the transaction you are requesting.

Table 5 General Card-Present Request Fields (Continued)

Field	Description	Used By: Required (R) or Optional (O)	Data Type & Length
card_cvIndicator	Indicates whether a CVN code was sent. Possible values: <ul style="list-style-type: none"> <li>■ 0 (default): CVN service not requested. Cybersource uses this default when you do not include <b>card_cvNumber</b> in the request.</li> <li>■ 1 (default): CVN service requested and supported. Cybersource uses this default when you include <b>card_cvNumber</b> in the request.</li> <li>■ 2: CVN on payment card is illegible.</li> <li>■ 9: CVN not imprinted on payment card.</li> </ul>	ccAuthService (O)	String with numbers only (1)
card_cvNumber	CVN. See CVN information in <i>Credit Card Services for CyberSource through VisaNet Using the Simple Order API</i> .	ccAuthService (O)	String with numbers only (4)
card_encryptedData	Payment card data that was encrypted by the POS terminal. The encrypted data can be track data or keyed data and is in tag-length-value (TLV) format. A data set consists of encrypted data and the encryption attributes that are associated with the encrypted data. This field can contain multiple data sets. See <a href="#">Appendix D, "Encrypted Data," on page 71</a> .	ccAuthService (O) ccCreditService (O for stand-alone credits)	String (255)
card_expirationMonth	Two-digit month in which payment card expires. Format: MM. Possible values: 01 through 12. Leading 0 is required.	ccAuthService (R when keyed.) <sup>2</sup>	String (2)
card_expirationYear	Four-digit year in which payment card expires. Format: YYYY.	ccAuthService (R when keyed.) <sup>2</sup>	String (4)
cashbackAmount	Cashback amount in the acquirer's currency.	ccAuthService (O) ccAuthReversalService (O)	String (9)

1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

2 This field is optional when your Cybersource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 16. **Important** It is your responsibility to determine whether a field is required for the transaction you are requesting.

Table 5 General Card-Present Request Fields (Continued)

Field	Description	Used By: Required (R) or Optional (O)	Data Type & Length
ccAuthService_ aggregatedAuth Indicator	<p>Flag for a mass transit transaction that indicates whether the authorization is aggregated. Possible values:</p> <ul style="list-style-type: none"> <li>■ <code>true</code>: Aggregated</li> <li>■ <code>false</code>: Not aggregated</li> </ul> <p>The value for this field corresponds to the following data in the TC 33 capture file<sup>1</sup>:</p> <ul style="list-style-type: none"> <li>■ Record: CP01 TCR7</li> <li>■ Position: 150-151</li> <li>■ Field: Transit Transaction Type Indicator</li> </ul> <p>This field is supported only for mass transit transactions.</p> <p>See <a href="#">"Mass Transit Transactions," page 12</a>.</p>	ccAuthService (O)	String (5)
ccAuthService_ captureDate	<p>Date on which the customer initiated a contactless transit transaction.</p> <p>Format: MMDD</p> <p>This field is supported only for mass transit transactions.</p> <p>See <a href="#">"Mass Transit Transactions," page 12</a>.</p>	ccAuthService (O)	String (4)
ccAuthService_ commerceIndicator	Type of transaction. For a card-present transaction, you must set this field to <code>retail</code> .	ccAuthService (R)	String (13)

- 1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.
- 2 This field is optional when your Cybersource account is configured for relaxed requirements for address data and expiration date. See ["Relaxed Requirements for Address Data and Expiration Date," page 16](#). **Important** It is your responsibility to determine whether a field is required for the transaction you are requesting.

Table 5 General Card-Present Request Fields (Continued)

Field	Description	Used By: Required (R) or Optional (O)	Data Type & Length
ccAuthService_ debtRecoveryIndicator	<p>Flag for a mass transit transaction that indicates whether the purpose of the authorization is to recover debt. Possible values:</p> <ul style="list-style-type: none"> <li>■ <code>true</code>: Debt recovery transaction</li> <li>■ <code>false</code>: Not a debt recovery transaction</li> </ul> <p>The value for this field corresponds to the following data in the TC 33 capture file<sup>1</sup>:</p> <ul style="list-style-type: none"> <li>■ Record: CP01 TCR7</li> <li>■ Position: 150-151</li> <li>■ Field: Transit Transaction Type Indicator</li> </ul> <p>This field is supported only for mass transit transactions.</p> <p>See <a href="#">"Mass Transit Transactions," page 12</a>.</p>	ccAuthService (O)	String (5)
ccAuthService_ deferredAuthIndicator	<p>Indicates whether the authorization request was delayed because connectivity was interrupted. Possible values:</p> <ul style="list-style-type: none"> <li>■ <code>true</code>: Deferred authorization</li> <li>■ <code>false</code> (default): Not a deferred authorization</li> </ul> <p>The value for this field corresponds to the following two data items in the TC 33 capture file<sup>1</sup>:</p> <ul style="list-style-type: none"> <li>■ First data item: <ul style="list-style-type: none"> <li>● Record: CP01 TCR0</li> <li>● Position: 160-163</li> <li>● Field: Message Reason Code</li> </ul> </li> <li>■ Second data item: <ul style="list-style-type: none"> <li>● Record: CP01 TCR7</li> <li>● Position: 150-151</li> <li>● Field: Transit Transaction Type Indicator</li> </ul> </li> </ul> <p>This field is supported only for mass transit transactions.</p> <p>See <a href="#">"Mass Transit Transactions," page 12</a>.</p>	ccAuthService (O)	String (5)

---

1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

2 This field is optional when your Cybersource account is configured for relaxed requirements for address data and expiration date. Table 5 General Card-Present Request Fields (Continued)

Field	Description	Used By: Required (R) or Optional (O)	Data Type & Length
ccAuthService_ transportationMode	<p>Mode of transportation or type of transportation-related payment. Possible values:</p> <ul style="list-style-type: none"> <li>■ 00: Use this value for: <ul style="list-style-type: none"> <li>● Debt recovery</li> <li>● More than one transportation mode</li> <li>● Unknown transportation mode</li> </ul> </li> <li>■ 01: Urban bus</li> <li>■ 02: Interurban bus</li> <li>■ 03: Light train mass transit</li> <li>■ 04: Train</li> <li>■ 05: Commuter train</li> <li>■ 06: Water-borne vehicle</li> <li>■ 07: Toll</li> <li>■ 08: Parking</li> <li>■ 09: Taxi</li> <li>■ 10: High-speed train</li> <li>■ 11: Rural bus</li> <li>■ 12: Express commuter train</li> <li>■ 13: Paratransit</li> <li>■ 14: Self-driving vehicle</li> <li>■ 15: Coach</li> <li>■ 16: Locomotive</li> <li>■ 17: Powered motor coach</li> <li>■ 18: Trailer</li> <li>■ 19: Regional train</li> <li>■ 20: Inter-city transportation</li> <li>■ 21: Funicular train</li> <li>■ 22: Cable car</li> </ul> <p>This field is supported only for mass transit transactions.</p> <p>See <a href="#">"Mass Transit Transactions," page 12.</a></p> <p>The value for this field corresponds to the following data in the TC 33 capture file<sup>1</sup>:</p> <ul style="list-style-type: none"> <li>■ Record: CP01 TCR7</li> <li>■ Position: 153-154</li> <li>■ Field: Transportation Mode Indicator</li> </ul>	ccAuthService (O)	String (2)

- 1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.
- 2 This field is optional when your Cybersource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 16. **Important** It is your responsibility to determine whether a field is required for the transaction you are requesting.

Table 5 General Card-Present Request Fields (Continued)

Field	Description	Used By: Required (R) or Optional (O)	Data Type & Length
ccCaptureService_ gratuityAmount	<p>Gratuity or tip amount for restaurants when the card is present. Allowed only when <b>ccCaptureService_industryDatatype</b> is <code>restaurant</code>.</p> <p>When your customer uses a debit card or prepaid card, and you receive a partial authorization, the payment networks recommend that you do not submit a capture amount that is higher than the authorized amount. When the capture amount exceeds the partial amount that was approved, the issuer has chargeback rights for the excess amount. For information about partial authorizations, see <i>Credit Card Services for CyberSource through VisaNet Using the Simple Order API</i>.</p>	ccCaptureService (O)	String (12)
ccCaptureService_ industryDatatype	<p>Indicates whether the transaction includes restaurant data. You must set this field to <code>restaurant</code> in order for restaurant data to be sent to the processor.</p> <p>When this field is not set to <code>restaurant</code> or is not included in the request, Cybersource does not send restaurant data to the processor.</p>	ccCaptureService (R for restaurant transactions)	String (10)
extendedCreditTotal Count	<p>Number of months over which the cardholder can pay for the purchase.</p> <p>You can use this field when offering extended credit to a cardholder at a retail location. The cardholder provides this value. The issuer pays you for the purchase in one payment, and then the cardholder pays the issuer in the number of monthly payments specified by this value.</p> <p>This field is supported only on Cybersource through VisaNet for acquirers in South Africa.</p>	ccAuthService (O)	String (2)
<p>1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.</p> <p>2 This field is optional when your Cybersource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 16. <b>Important</b> It is your responsibility to determine whether a field is required for the transaction you are requesting.</p>			

Table 5 General Card-Present Request Fields (Continued)

Field	Description	Used By: Required (R) or Optional (O)	Data Type & Length
item_#_productCode	Type of product. This value is used to identify the product category (electronic, handling, physical, service, or shipping). The default value is <code>default</code> . For a list of valid values, see the information about product codes in <i>Credit Card Services for CyberSource through VisaNet Using the Simple Order API</i> .  When this field is not set to <code>default</code> or one of the values related to shipping and/or handling, the <b>item_#_quantity</b> , <b>item_#_productName</b> , and <b>item_#_productSKU</b> fields are required. For information about items and grand totals, see <a href="#">Getting Started with CyberSource Advanced for the Simple Order API</a> .	ccAuthService (O)	String (30)
item_#_productName	Name of product.	ccAuthService (R when <b>item_#_productCode</b> is not <code>default</code> or one of the values related to shipping and/or handling.)	String (30)
item_#_productSKU	Product identifier code.	ccAuthService (R when <b>item_#_productCode</b> is not <code>default</code> or one of the values related to shipping and/or handling.)	String (15)
item_#_quantity	Default is 1.	ccAuthService (R when <b>item_#_productCode</b> is not <code>default</code> or one of the values related to shipping and/or handling.)	Integer (10)

- The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.
- This field is optional when your Cybersource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 16. **Important** It is your responsibility to determine whether a field is required for the transaction you are requesting.

**Table 5 General Card-Present Request Fields (Continued)**

Field	Description	Used By: Required (R) or Optional (O)	Data Type & Length
item_#_taxAmount	<p>Total tax to apply to the product. This value cannot be negative. The tax amount and the unit price must be in the same currency.</p> <p>The tax amount field is additive. The following example uses a two-exponent currency such as USD:</p> <ol style="list-style-type: none"> <li>You include the following items in your request: <pre> item_0_unitPrice=10.00 item_0_quantity=1 item_0_taxAmount=0.80 item_1_unitPrice=20.00 item_1_quantity=1 item_1_taxAmount=1.60 </pre> </li> <li>The total amount authorized is 32.40, not 30.00 with 2.40 of tax included.</li> </ol>	ccAuthService (O)	String (15)
item_#_unitPrice	<p>Per-item price of the product. You must include either this field or <b>purchaseTotals_grandTotalAmount</b> in your request. This value cannot be negative. For information about items and grand totals, see <a href="#">Getting Started with CyberSource Advanced for the Simple Order API</a>.</p> <p>You can include a decimal point (.) in the value for this field, but you cannot include any other special characters. Cybersource truncates the amount to the correct number of decimal places.</p>	ccAuthService (See description)	String (15)
<ol style="list-style-type: none"> <li>The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.</li> <li>This field is optional when your Cybersource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 16. <b>Important</b> It is your responsibility to determine whether a field is required for the transaction you are requesting.</li> </ol>			

Table 5 General Card-Present Request Fields (Continued)

Field	Description	Used By: Required (R) or Optional (O)	Data Type & Length
jpo_jccaTerminalID	<p>Unique Japan Credit Card Association (JCCA) terminal identifier that is provided by Cybersource.</p> <p>The difference between this field and the <b>pos_terminalID</b> field is that you can define <b>pos_terminalID</b>, but <b>jpo_jccaTerminalID</b> is defined by the JCCA and is used only in Japan.</p> <p>The value for this field corresponds to the following data in the TC 33 capture file<sup>1</sup>:</p> <ul style="list-style-type: none"> <li>■ Record: CP01 TCR9</li> <li>■ Position: 130-142</li> <li>■ Field: Terminal Identification Number</li> </ul>	<p>ccAuthService (R when the terminal ID number is not recorded in your account. Otherwise, O.)</p> <p>ccCreditService (R for stand-alone credits. O for follow-on credits.)</p>	Integer (13)
jpo_jis2TrackData	Japanese Industrial Standard Type 2 (JIS2) track data from the front of the card.	<p>ccAuthService (O)</p> <p>ccCreditService (O)</p>	String (69)
merchandiseCode	Identifier for the merchandise. This value must be right justified. In Japan, this value is called a <i>goods code</i> .	ccAuthService (O)	Integer (7)
merchantID	Your Cybersource merchant ID.	ccAuthService (R)	String (30)
merchantReferenceCode	Merchant-generated order reference or tracking number. Cybersource recommends that you send a unique value for each transaction so that you can perform meaningful searches for the transaction. For information about tracking orders, see <a href="#">Getting Started with CyberSource Advanced for the Simple Order API</a> .	ccAuthService (R)	String (50)

1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

2 This field is optional when your Cybersource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 16. **Important** It is your responsibility to determine whether a field is required for the transaction you are requesting.

**Table 5 General Card-Present Request Fields (Continued)**

Field	Description	Used By: Required (R) or Optional (O)	Data Type & Length
mPOS_deviceType	<p>Type of mPOS device. Possible values:</p> <ul style="list-style-type: none"> <li>■ 0: Dongle</li> <li>■ 1: Phone or tablet</li> </ul> <p>The value for this field corresponds to the following data in the TC 33 capture file<sup>1</sup>:</p> <ul style="list-style-type: none"> <li>■ Record: CP01 TCR6</li> <li>■ Position: 141</li> <li>■ Field: Mastercard mPOS Transaction</li> </ul> <p>This field is supported only for Mastercard transactions.</p>	ccAuthService (O)	String (1)
<p>1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.</p> <p>2 This field is optional when your Cybersource account is configured for relaxed requirements for address data and expiration date. **Table 5 General Card-Present Request Fields (Continued)**

Field	Description	Used By: Required (R) or Optional (O)	Data Type & Length
pos_entryMode	<p>Method of entering payment card information into the POS terminal. Possible values:</p> <ul style="list-style-type: none"> <li>■ <b>contact</b>: Read from direct contact with chip card.</li> <li>■ <b>contactless</b>: Read from a contactless interface using chip data.</li> <li>■ <b>keyed</b>: Manually keyed into POS terminal.</li> <li>■ <b>msd</b>: Read from a contactless interface using magnetic stripe data (MSD).</li> <li>■ <b>swiped</b>: Read from payment card magnetic stripe.</li> </ul> <p>The <b>contact</b>, <b>contactless</b>, and <b>msd</b> values are supported only for EMV transactions. See "<a href="#">Europay, Mastercard, Visa (EMV)</a>," page 10.</p>	ccAuthService (R)	String (11)
pos_terminalCapability	<p>POS terminal's capability. Possible values:</p> <ul style="list-style-type: none"> <li>■ 1: Terminal has a magnetic stripe reader only.</li> <li>■ 2: Terminal has a magnetic stripe reader and manual entry capability.</li> <li>■ 3: Terminal has manual entry capability only.</li> <li>■ 4: Terminal can read chip cards.</li> <li>■ 5: Terminal can read contactless chip cards; cannot use contact to read chip cards.</li> </ul> <p>For an EMV transaction, the value of this field must be 4 or 5. See "<a href="#">Europay, Mastercard, Visa (EMV)</a>," page 10.</p>	ccAuthService (O)	Integer (1)

---

- 1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.
- 2 This field is optional when your Cybersource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 16. **Important** It is your responsibility to determine whether a field is required for the transaction you are requesting.

Table 5 General Card-Present Request Fields (Continued)

Field	Description	Used By: Required (R) or Optional (O)	Data Type & Length
pos_ terminalCompliance	<p>Flag that indicates whether the terminal is compliant with standards mandated by the Reserve Bank of India for card-present domestic transactions in India. Format:</p> <ul style="list-style-type: none"> <li>■ First character indicates whether the terminal supports terminal line encryption (TLE). Possible values: <ul style="list-style-type: none"> <li>● 1: Not certified</li> <li>● 2: Certified</li> </ul> </li> <li>■ Second character indicates whether the terminal supports Unique Key Per Transaction (UKPT) and Derived Unique Key Per Transaction (DUKPT). Possible values: <ul style="list-style-type: none"> <li>● 1: Not certified</li> <li>● 2: Certified</li> </ul> </li> </ul> <p><b>Example</b> 21 indicates that the terminal supports TLE but does not support UKPT/ DUKPT.</p> <p>You and the terminal vendors are responsible for terminal certification. If you have questions, contact your acquirer.</p> <p>This field is supported only for Mastercard transactions.</p> <p><b>Cybersource through VisaNet</b> The value for this field corresponds to the following data in the TC 33 capture file<sup>1</sup>:</p> <ul style="list-style-type: none"> <li>■ Record: CP01 TCR6</li> <li>■ Position: 92-93</li> <li>■ Field: Mastercard Terminal Compliance Indicator</li> </ul>	ccAuthService (R for card-present transactions in India. Otherwise, not used.)	Integer (2)
<p>1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.</p> <p>2 This field is optional when your Cybersource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 16. <b>Important</b> It is your responsibility to determine whether a field is required for the transaction you are requesting.</p>			

Table 5 General Card-Present Request Fields (Continued)

Field	Description	Used By: Required (R) or Optional (O)	Data Type & Length
pos_terminalID	Identifier for the terminal at your retail location. A list of all possible values is stored in your Cybersource account. When terminal ID validation is enabled for your Cybersource account, the value you send for this field is validated against the list each time you include the field in a request. To enable or disable terminal ID validation, contact Cybersource Customer Support.  When you do not include this field in a request, Cybersource uses the default value that is defined in your Cybersource account.	ccAuthService (O)	String (8)
purchaseTotals_ currency	Currency used for order. For possible values, see <a href="#">ISO Standard Currency Codes</a> .	ccAuthService (R)	String (5)
purchaseTotals_ grandTotalAmount	Grand total for the order. You must include either this field or <b>item_#_unitPrice</b> in your request. For information about items and grand totals, <a href="#">Getting Started with CyberSource Advanced for the Simple Order API</a> .	ccAuthService (See description)	String (15)
salesSlipNumber	Transaction identifier that you generate.  In Argentina, the value for this field corresponds to the following data in the TC 33 capture file <sup>1</sup> : <ul style="list-style-type: none"> <li>■ Record: CP01 TCR9</li> <li>■ Position: 8-15</li> <li>■ Field: Field Purchase Receipt Number</li> </ul> In Japan, the value for this field corresponds to the following data in the TC 33 capture file <sup>1</sup> : <ul style="list-style-type: none"> <li>■ Record: CP01 TCR9</li> <li>■ Position: 143-147</li> <li>■ Field: Sales Slip Number</li> </ul>	ccAuthService: <ul style="list-style-type: none"> <li>■ R in Argentina.</li> <li>■ R in Japan.</li> <li>■ Otherwise, not used.</li> </ul> ccCreditService: <ul style="list-style-type: none"> <li>■ R for follow-on credits and stand-alone credits in Argentina.</li> <li>■ R for stand-alone credits in Japan.</li> <li>■ Otherwise, not used.</li> </ul>	In Argentina: Integer (8)  In Japan: Integer (5)

1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

2 This field is optional when your Cybersource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 16. **Important** It is your responsibility to determine whether a field is required for the transaction you are requesting.

**Table 5 General Card-Present Request Fields (Continued)**

Field	Description	Used By: Required (R) or Optional (O)	Data Type & Length
shipTo_postalCode	<p>Postal code for the shipping address. The postal code must consist of 5 to 9 digits.</p> <p>When the shipping country is the U.S., the 9-digit postal code must follow this format: [5 digits][dash][4 digits]</p> <p><b>Example</b> 12345-6789</p> <p>When the shipping country is Canada, the 6-digit postal code must follow this format: [alpha][numeric][alpha][space][numeric][alpha][numeric]</p> <p><b>Example</b> A1B 2C3</p>	ccAuthService (R when shipping address information is included in the request and shipping to the U.S. or Canada; otherwise, O.)	String (10)
transactionLocalDate Time	<p>Date and time at your physical location.</p> <p>Format: YYYYMMDDhhmmss, where YYYY = year MM = month DD = day hh = hour mm = minutes ss = seconds</p> <p>The value for this field corresponds to the following data in the TC 33 capture file<sup>1</sup>:</p> <ul style="list-style-type: none"> <li>■ Record: CP01 TCR9</li> <li>■ Position: 16-21</li> <li>■ Field: Local Date</li> </ul> <p>In Argentina:</p> <ul style="list-style-type: none"> <li>■ When you do not include this field, the value for this field is generated based on the time zone recorded in your account.</li> <li>■ When you do not include this field, and no time zone is recorded in your account, the value for this field is generated based on GMT when the request is received.</li> </ul>	ccAuthService (R in Argentina when the time zone is not recorded in your account. Otherwise, O.)	String (14)

---

1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

2 This field is optional when your Cybersource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 16. **Important** It is your responsibility to determine whether a field is required for the transaction you are requesting.

## P2PE Request Fields

**Table 6 P2PE Request Fields**

Field	Description	Used By: Required (R) or Optional (O)	Data Type & Length
encryptedPayment_ data	Encrypted Bluefin PCI P2PE payment data. Obtain the encrypted payment data from a Bluefin-supported device. See " <a href="#">PCI P2P Encryption with Bluefin</a> ," page 13.	ccAuthService (R for authorizations that use Bluefin PCI P2PE)  ccCreditService (R for stand-alone credits that use Bluefin PCI P2PE)	String (3072)
encryptedPayment_ descriptor	Format of the encrypted payment data. The value for Bluefin PCI P2PE is Ymx1ZWZpbG==. See " <a href="#">PCI P2P Encryption with Bluefin</a> ," page 13.	ccAuthService (R for authorizations that use Bluefin PCI P2PE)  ccCreditService (R for stand-alone credits that use Bluefin PCI P2PE)	String (128)

## Reply Fields

**Table 7 Reply Fields**

Field	Description	Returned By	Data Type & Length
ccAuthReply_ issuerPINrequest	Value of 1 in this field indicates that the issuer requires a PIN. When you request an authorization for a card-present transaction but do not include a PIN in the request, the issuer can require the PIN. To complete the authorization: <ol style="list-style-type: none"> <li>1 Request a PIN from the customer.</li> <li>2 Send a duplicate authorization request that includes the PIN and the <b>emvRequest_repeat</b> field.</li> </ol> This field is supported only for Mastercard transactions.	ccAuthReply	String (1)

1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

Table 7 Reply Fields (Continued)

Field	Description	Returned By	Data Type & Length
emvReply_ chipValidationResults	<p>Cryptogram validation results returned by the entity or service specified in <b>emvReply_chipValidationType</b>. Possible values:</p> <ul style="list-style-type: none"> <li>■ A: Application cryptogram is valid, but the application transaction counter (ATC) is outside the allowed range. (A large increase in ATC values can indicate data copying or other fraud.)</li> <li>■ C: Chip validation was completed successfully.</li> <li>■ E: Application cryptogram is valid, but the ATC indicates possible replay fraud.</li> <li>■ F: Format error in the chip data.</li> <li>■ G: Application cryptogram is valid but is not a valid authorization request cryptogram (ARQC).</li> <li>■ I: Application cryptogram is invalid.</li> <li>■ T: Application cryptogram is valid, but terminal verification results (TVR) or card verification results (CVR) are invalid.</li> <li>■ U: Application cryptogram could not be validated because of a technical error.</li> </ul> <p>This field is returned only for Mastercard near field communication (NFC) authorizations that use payment network tokens on Cybersource through VisaNet.</p>	ccAuthReply	String (1)
1	<p>The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.</p>		

Table 7 Reply Fields (Continued)

Field	Description	Returned By	Data Type & Length
emvReply_ chipValidationType	<p>Entity or service that provided the validation results returned in the <b>emvReply_chipValidationResults</b> field. Possible values:</p> <ul style="list-style-type: none"> <li>■ 02: Mastercard pre-validation service. The Mastercard authorization platform validated the cryptogram before the issuer received the authorization request.</li> <li>■ 03: Mastercard stand-in service. The Mastercard authorization platform validated the cryptogram because the issuer was not available.</li> <li>■ 50: Issuer.</li> <li>■ 90: Chip fall-back transaction downgrade process. The chip could not be read.</li> </ul> <p>This field is returned only for Mastercard near field communication (NFC) authorizations that use payment network tokens on Cybersource through VisaNet.</p>	ccAuthReply	String (2)
emvReply_ combinedTags	<p>EMV data that is transmitted from the chip card to the issuer and from the issuer to the chip card. The EMV data is in the tag-length-value format and includes chip card tags, terminal tags, and transaction detail tags. See "<a href="#">Europay, Mastercard, Visa (EMV)</a>," page 10.</p> <p>For information about the individual tags, see the "Application Specification" section in the <i>EMV 4.3 Specifications</i>: <a href="http://emvco.com">http://emvco.com</a></p> <p>Information in this guide about EMV applies to payment card processing and PIN debit processing. All other information in this guide applies only to payment card processing.</p>	ccAuthReply ccAuthReversalReply pinDebitCreditReply pinDebitPurchaseReply pinDebitReversalReply	String (252)
encryptedPayment_ errorCode	<p>Error code returned by Bluefin when the decryption fails. See <a href="#">Appendix C, "Bluefin PCI P2PE Error Codes,"</a> on page 70.</p>	ccAuthReply ccCreditReply	String (4)
encryptedPayment_ referenceID	<p>Unique transaction identifier returned by Bluefin. You can use this value for tracking and reporting. See "<a href="#">PCI P2P Encryption with Bluefin</a>," page 13.</p>	ccAuthReply ccCreditReply	Integer (25)
<p>1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.</p>			

Table 7 Reply Fields (Continued)

Field	Description	Returned By	Data Type & Length
paymentAccountReference	<p>Visa-generated reference number that identifies a card-present transaction for which you provided one of the following:</p> <ul style="list-style-type: none"> <li>■ Visa primary account number (PAN)</li> <li>■ Visa-generated token for a PAN</li> </ul> <p>This reference number serves as a link to the cardholder account and to all transactions for that account.</p> <p><b>Cybersource through VisaNet</b> The value for this field corresponds to the following data in the TC 33 capture file<sup>1</sup>:</p> <ul style="list-style-type: none"> <li>■ Record: CP01 TCR8</li> <li>■ Position: 79-110</li> <li>■ Field: Payment Account Reference</li> </ul>	ccAuthReply ccAuthReversalReply	String (32)
salesSlipNumber	<p>Transaction identifier.</p> <p>The difference between this field and the <b>receiptNumber</b> field is that Cybersource generates the receipt number, and you must print the receipt number on the receipt; whereas you can generate the sales slip number, and you can choose to print the sales slip number on the receipt.</p>	ccAuthReply	Integer (5)

<sup>1</sup> The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to Cybersource. Cybersource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment networks.

# Bluefin PCI P2PE Error Codes

The following table describes the error codes returned by Bluefin for Bluefin PCI P2PE transactions. For information about encrypted transactions, see ["PCI P2P Encryption with Bluefin," page 13](#). When an encryption error occurs:

- The reason code is set to 150 in the authorization or stand-alone credit reply message. This value indicates that a general system failure occurred and your authorization or stand-alone credit request was not processed.
- The value for the **encryptedPayment\_errorCode** field is set to the Bluefin PCI P2PE error code.

**Table 8 Bluefin PCI P2PE Error Codes**

Error Code	Description
1001	Generic or unknown error code.
1101	Internal system configuration setup error
1102	
1103	
1104	
1105	
1202	Device not found or device not recognized.
1203	Device not active.
1204	Invalid firmware version.
1303	All decryptions failed.
1404	Decryption failed for some other reason.
1406	Decrypted result did not include payment card information.

# Encrypted Data

Use the **card\_encryptedData** field to include encrypted card data in your request. The encrypted data can be track data or keyed data and is in tag-length-value (TLV) format. A data set consists of encrypted data and the encryption attributes that are associated with the encrypted data. The **card\_encryptedData** field can contain multiple data sets. PIN data is optional because some networks no longer require the PIN, thereby making the **card\_encryptedData** field optional.

Format: Data set ID + Length of TLV sequence in bytes + [TLV, TLV, TLV, ...]

<b>2 characters (1 byte)</b>	<b>4 characters (2 bytes)</b>	<b>Variable length</b>
Data set ID	Length of TLV sequence in bytes	TLV sequence

**Example** 01001F01010502051000736081030500021000010401031F1F08D65E6B2922F58C63

Data Set ID (1 byte)	Length of TLV Sequence (2 bytes)	TLV Sequence (31 bytes)
01	001F	010105 02051000736081 03050002100001 040103 1F1F08D65E6B2922F58C63

**Table 9 Tags for Encrypted Data**

Tag	Description	Length in Characters
01	Key management scheme for the encryption data in this data set. Possible value: <ul style="list-style-type: none"> <li>■ 01: Acquirer working key (AWK)</li> <li>■ 05: Derived unique key per transaction (DUKPT).</li> </ul>	2
02	Key set identifier that identifies the key used for encryption.	6 to 11
03	Device ID and transaction counter. This value consists of a 19-bit device ID and 21-bit transaction counter.	10
04	Identifier for the encryption algorithm that is used to encipher either the encrypted data elements in this data set or the keys in the associated key management data element. Possible value: <ul style="list-style-type: none"> <li>■ 03</li> </ul>	2
1F1F	Encrypted PIN data. This value is a PIN or numeric password, encrypted and formatted as a block of 16 hexadecimal digits.  This tag contains the PIN data, which is optional because some networks no longer require the PIN. Your agreement with the debit networks determines whether the customer must provide a PIN.	16
