About This Guide

Audience and Purpose

This guide is written for application developers who want to use the CyberSource SCMP API to integrate dynamic currency conversion (DCC) for First Data into an order management system.

Implementing the CyberSource DCC services requires software development skills. You must write code that uses the API request and reply fields to integrate the DCC services into an existing order management system.

Conventions

The following special statements are used in this document:

A Note contains helpful suggestions or references to material not contained in this document.

An Important statement contains information essential to successfully completing a task or learning a concept.

Working with DCC

The CyberSource DCC solution described in this document works with the CyberSource credit card services, which are described in *Credit Card Services Using the SCMP API*. This DCC solution is supported on the following processors and card types:

- FDC Nashville Global—Visa and Mastercard
- FDMS South—Visa and Mastercard

The DCC service converts a foreign cardholder’s purchase from your local currency to the cardholder’s billing currency. This service can help you improve or create business relationships with customers who prefer to make purchases in their own currency.

### Requirements

The requirements for using the DCC service are:

- Your local currency must be USD.
- You must contact CyberSource Customer Support to have your account configured for this feature.
- You must provide the customer with a receipt showing the USD amount, the foreign currency amount, and the rate of exchange used to convert the order amount. You must also have the customer sign an acknowledgement that the customer had a choice to pay in USD and that the choice of currency is final.

### Limitations

When requesting the DCC service, do not request any of these CyberSource services in the same request message:

- Tax calculation
- Authorization
- Capture
- Credit
Do not use Level II or Level III processing with DCC.

Do not enable partial authorizations for orders that use DCC.

---

**Important**

For DCC transactions, USD is the only supported currency for full authorization reversals. You can reverse an authorization if the DCC indicator is 2 or 3 because these values indicate that the transaction was in USD. If you request a full authorization reversal when the DCC indicator is 1, which indicates that the transaction was in a foreign currency, the reversed amount will be incorrect.

---

**Terminology**

**Table 2  DCC Terminology**

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Billing currency</td>
<td>Cardholder’s currency in which their card is denominated and in which transactions are posted to the cardholder’s account.</td>
</tr>
<tr>
<td>Converted amount</td>
<td>Amount of the transaction, denominated in the cardholder’s billing currency.</td>
</tr>
<tr>
<td>DCC markup</td>
<td>Commission added to the transaction price at the time of the currency conversion.</td>
</tr>
<tr>
<td>DCC service</td>
<td>Service that enables you to offer foreign customers an active choice to pay in the billing currency associated with their card. This service is supported only for Visa and MasterCard.</td>
</tr>
<tr>
<td>Exchange rate</td>
<td>Conversion factor used to convert an amount in one currency to an equivalent amount in another currency.</td>
</tr>
<tr>
<td>Local currency</td>
<td>Your selling currency that you use for pricing your goods and in which you usually submit transactions for processing.</td>
</tr>
<tr>
<td>Margin rate percentage</td>
<td>DCC markup.</td>
</tr>
<tr>
<td>Original amount</td>
<td>Amount of the transaction denominated in your local currency.</td>
</tr>
</tbody>
</table>

**Relaxed Requirements for Address Data and Expiration Date**

To enable relaxed requirements for address data and expiration date, contact CyberSource Customer Support to have your account configured for this feature. For details about relaxed requirements for address data and expiration date, see Relaxed Requirements for Address Data and Expiration Date page.
Using DCC for an Order

This section guides you through the process of calling the DCC service for a credit card transaction.

---

**Step 1** Request the DCC service.

a Include the statement `ics_applications=ics_dcc` in your request.

b Include the required DCC fields in your request:
- amount: original amount
- currency: local currency
- customer_cc_number: first 6 to 10 digits of the credit card number
- merchant_id
- merchant_ref_number
For details about these fields, see "Request-Level Fields for the DCC Service," page 14 and "Offer-Level Fields for the DCC Service," page 15.

c Receive the DCC reply fields:
- dcc_dcc_supported: flag that indicates whether DCC is supported for this order.
- dcc_exchange_rate: exchange rate
- dcc_exchange_rate_timestamp: exchange rate timestamp
- dcc_foreign_amount: converted amount
- dcc_foreign_currency: converted currency code
- dcc_margin_rate_percentage: DCC markup
For details about these fields, see "Reply Fields for the DCC Service," page 16.

---

**Step 2** If necessary, process the order without DCC.

If the purchase is not eligible for DCC, or DCC processing is not available, proceed with the order in your local currency. In your transaction requests (authorization, capture, credit), include the DCC indicator set to 2, which indicates that the order amount could not be converted.

---

**Note**

If you are using your local currency for the order, do not perform the rest of this DCC procedure.
Step 3  Query the customer.

If the purchase is eligible for DCC, you must get permission from the customer before you can proceed:

a  Explain to your customer that the order is a candidate for DCC.

b  Display the required DCC information to the customer. Contact your acquirer for these requirements.

c  Ask your customer if they would like to complete the order in their billing currency.

d  After your customer chooses a currency for the order, display a message about the DCC agreement in accordance with the payment card company rules. A typical message is, "I acknowledge that I was offered a choice of currencies in which to perform this transaction, and I understand that this choice is final."

---

Important

Before you can use DCC for a purchase, the cardholder must explicitly choose to have the purchases subjected to DCC. Because of this requirement, you cannot use DCC for recurring payments or a recurring subscription.

---

Step 4  If necessary, proceed in the local currency.

If the customer does not choose DCC, proceed with the order in your local currency:

- In your transaction requests (authorization, capture, credit), include the DCC indicator set to 3, which indicates that the cardholder declined the currency conversion.
- Continue with this procedure.

Step 5  Authorize the payment.

For information about creating an authorization request, see Credit Card Services Using the SCMP API.

The following table lists the DCC fields required for the authorization, capture, and credit services. These request field names are not exactly the same as the names of the DCC service reply fields. For details about these fields, see "DCC Request-Level Fields for Credit Card Services," page 18.
Chapter 1  Working with DCC

Step 6  Display DCC information.

If the customer chose DCC, notify your customer that the transaction was successfully authorized, and display required DCC information to the customer.

Step 7  Capture the authorization.

For information about creating a capture request, see Credit Card Services Using the SCMP API.

If DCC data was included in the authorization request, it must also be included in the capture request:

- If the capture amount is the same as the authorization amount, submit a capture request that includes the same DCC values that were included in the authorization request.
- If the capture amount is different from the authorization amount, call the DCC service with the capture amount, and then submit a capture request that includes the new DCC values.

Step 8  Optional: credit the payment.

For information about creating a credit request, see Credit Card Services Using the SCMP API.

If DCC data was included in the capture request, it must also be included in the credit request:

- For a follow-on credit with a credit amount that is the same as the capture amount, submit a credit request that includes the same DCC values that were included in the capture request.

Table 3  DCC Fields Required for the CyberSource Authorization, Capture, and Credit Services

<table>
<thead>
<tr>
<th>Request Field Name for Authorization, Capture, and Credit Services</th>
<th>Reply Field Name for the DCC Service</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>dcc_indicator</td>
<td>No corresponding field.</td>
<td>DCC indicator: If the customer chose DCC, set the indicator to 1. If the customer did not choose DCC, set the indicator to 3.</td>
</tr>
<tr>
<td>exchange_rate</td>
<td>dcc_exchange_rate</td>
<td>Exchange rate.</td>
</tr>
<tr>
<td>exchange_rate_timestamp</td>
<td>dcc_exchange_rate_timestamp</td>
<td>Exchange rate timestamp.</td>
</tr>
<tr>
<td>foreign_amount</td>
<td>dcc_foreign_amount</td>
<td>Converted amount.</td>
</tr>
<tr>
<td>foreign_currency</td>
<td>dcc_foreign_currency</td>
<td>Converted currency code.</td>
</tr>
</tbody>
</table>
For a follow-on credit with a credit amount that is different from the capture amount, call the DCC service with the credit amount, and then submit a credit request that includes the new DCC values.

For a stand-alone credit, call the DCC service with the credit amount, and then submit a credit request that includes the new DCC values.

---

**Note**

If the customer did not choose DCC, use the DCC values that you already obtained.

---

**Step 9** View the transaction results.

If the customer chose DCC, the following DCC values are included in the transaction results that are displayed on the Business Center:

- Original amount
- Converted amount
- Exchange rate

The DCC values are also included in the XML version of the Payment Submission Detail Report. For a description of this report, see the *Classic Reporting Developer Guide*.

---

**Important**

You must subscribe to the Payment Submission Detail Report in order to have access to it.
Formatting Restrictions

Unless otherwise noted, all fields are order and case insensitive and the fields accept special characters such as @, #, and %.

Note: Values for request-level and offer-level fields must not contain carets (^) or colons (:). However, they can contain embedded spaces and any other printable characters. When you use more than one consecutive space, CyberSource removes the extra spaces.

Data Type Definitions
