About This Guide

Audience and Purpose

This document is written for merchants who want to use Apple Pay in an iOS application and use information from Apple to process payments through CyberSource. This document provides an overview for integrating Apple and CyberSource services into an order management system.

Conventions

Note and Important Statements

Note

A *Note* contains helpful suggestions or references to material not contained in the document.

Important

An *Important* statement contains information essential to successfully completing a task or learning a concept.

Text and Command Conventions

Convention	Usage
Bold	<ul style="list-style-type: none"> Field and service names in text; for example: Include the card_accountNumber field. Items that you are instructed to act upon; for example: Click Save.
Screen text	<ul style="list-style-type: none"> XML elements. Code examples and samples. Text that you enter in an API environment; for example: Set the ccAuthService_run field to <code>true</code>.

Apple Pay Integrations

In-App Transactions Using the CyberSource API

Merchant Decryption

- 1 When the customer chooses to pay with Apple Pay, you use the Apple PassKit Framework to request the encrypted payment data from Apple.
- 2 Apple uses the Secure Element to create a payment token (the **PKPaymentToken** structure) and encrypt the token's payment data (the **paymentData** field of the **PKPaymentToken** structure) before it sends it your application.
- 3 You forward the encrypted payment data to your e-commerce back-end system to decrypt. For information on decryption, see:

https://developer.apple.com/library/ios/documentation/PassKit/Reference/PaymentTokenJSON/PaymentTokenJSON.html#//apple_ref/doc/uid/TP40014929-CH8-SW1

- 4 Using the CyberSource API, you submit the authorization request and include the decrypted payment data. See "Option 1: Merchant Decryption," page 22.

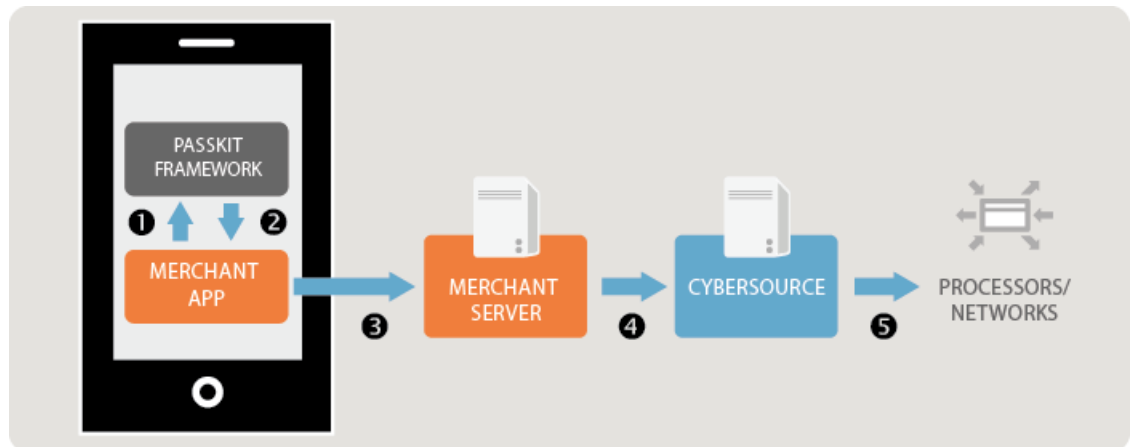

- CyberSource forwards the information to the payment network, including your processor and the relevant payment card company.

Important

You must use the Business Center or one of the CyberSource API services to capture, credit, or void the authorization. See [Credit Card Services Using the Simple Order API](#).

CyberSource Decryption

- When the customer chooses to pay with Apple Pay, you use the Apple PassKit Framework to request the encrypted payment data from Apple.
- Apple uses the Secure Element to create a payment token (the **PKPaymentToken** structure) and encrypt the token's payment data (the **paymentData** field of the **PKPaymentToken** structure) before it sends it your application.
- You forward the encrypted payment data to your e-commerce back-end system.
- Using the CyberSource API, you submit the authorization request. In the **encryptedPayment_data** field include the Base64 encoded value obtained from the **paymentData** field of the **PKPaymentToken** structure. See "[Option 2: CyberSource Decryption](#)," page 33.
- CyberSource decrypts the payment data and forwards the information to the payment network, including your processor and the relevant payment card company.

Important

You must use the Business Center or one of the CyberSource API services to capture, credit, or void the authorization. See [Credit Card Services Using the Simple Order API](#).

Web Transactions

Merchant Decryption

- 1 When the customer chooses to pay with Apple Pay, you use the Apple Pay JavaScript to request the encrypted payment data from Apple.
- 2 Apple uses the Secure Element to create a payment token (the **PKPaymentToken** structure) and encrypt the token's payment data (the **paymentData** field of the **PKPaymentToken** structure) before it sends it your application using the **onpaymentauthorized** callback function.
- 3 You forward the encrypted payment data to your e-commerce back-end system to decrypt. For information on decryption, see:

https://developer.apple.com/library/ios/documentation/PassKit/Reference/PaymentTokenJSON/PaymentTokenJSON.html#//apple_ref/doc/uid/TP40014929-CH8-SW1

- 4 Using the CyberSource API, you submit the authorization request and include the decrypted payment data. See "Option 2: CyberSource Decryption," page 33.
- 5 CyberSource forwards the information to the payment network, including your processor and the relevant payment card company.

Important

You must use the Business Center or one of the CyberSource API services to capture, credit, or void the authorization. See [Credit Card Services Using the Simple Order API](#).

CyberSource Decryption

- 1 When the customer chooses to pay with Apple Pay, you use the Apple Pay JavaScript to request the encrypted payment data from Apple.
- 2 Apple uses the Secure Element to create a payment token (the **PKPaymentToken** structure) and encrypt the token's payment data (the **paymentData** field of the **PKPaymentToken** structure) before it sends it your application via the **onpaymentauthorized** callback function.
- 3 You forward the encrypted payment data to your e-commerce back-end system.
- 4 Using the CyberSource API, you submit the authorization request. In the **encryptedPayment_data** field include the Base64 encoded value obtained from the **paymentData** field of the **PKPaymentToken** structure. See "Option 2: CyberSource Decryption," page 33.

- 5 CyberSource decrypts the payment data and forwards the information to the payment network, including your processor and the relevant payment card company.

You must use the Business Center or one of the CyberSource API services to capture, credit, or void the authorization. See [Credit Card Services Using the Simple Order API](#).

Requirements

You must be an *Admin* or *Team Agent* user of your Apple Developer Program account.

For details on each requirement below, see:

<https://developer.apple.com/support/apple-pay-domain-verification/>

To configure your requirements:

- Step 1** Register your merchant ID.

If you are currently processing In-App transactions, you can use the same merchant ID for processing Web transactions.

- Step 2** Create or upload a Certificate Signing Request (CSR), which is used to encrypt the payment information during the payment process.

If you are using the merchant decryption method (see "[Option 1: Merchant Decryption](#)," [page 22](#)), create a CSR.

If you are using the CyberSource decryption method (see "[Option 2: CyberSource Decryption](#)," [page 33](#)), upload the CSR that you created in the Business Center (see "[Enrolling in Apple Pay](#)," [page 19](#)).

If you are currently processing In-App transactions, you can use the same CSR for processing Web transactions.

- Step 3** Register your domain. Registration is required in order to use Apple Pay on your web site.

- Step 4** Create a Merchant Identity Certificate. This certificate is required in order to connect to the Apple servers.
-

**Note**

All optional features are described in [Payment Network Tokenization Using the Simple Order API](#).

Apple Pay JavaScript

Use the Apple Pay JavaScript to accept Apple Pay payments on your web site. The Apple Pay JavaScript tests that Apple Pay exists on your web site, displays the Apple Pay sheet, and receives the payment token.

Apple Pay Button

**Important**

When a customer clicks or taps an Apple Pay button, it must invoke the Apple Pay payment sheet.

For information on how to use Apple Pay buttons and the button styles, see:

<https://developer.apple.com/apple-pay/Apple-Pay-Identity-Guidelines.pdf>

You can use CSS templates provided by Apple to display the Apple Pay button on your web site. There are two templates: *logo only* button and *buy with* button. For more information, see [Displaying the Apple Pay Button](#).

ApplePaySession Class

The **ApplePaySession** class manages the payment process on your web site. The **ApplePaySession** object is the entry point for Apple Pay on your web site.

Before displaying the Apple Pay button (see ["Apple Pay Button," page 14](#)) or creating an Apple Pay session (see ["Create ApplePaySession Object," page 15](#)), ensure that the Apple Pay JavaScript API is available and enabled on the device.

To enable the Apple Pay JavaScript API:

- Step 1** Verify that the **window.ApplePaySession** class exists.
- Step 2** Call its **canMakePayments** or **canMakePaymentsWithActiveCard** method:
 - **canMakePayments**—verifies that the device is enabled for Apple Pay.
 - **canMakePaymentsWithActiveCard**—verifies that the device is enabled for Apple Pay and the customer has a card stored on the device. You can call this method only if Apple Pay is the default payment method during your checkout flow, or if you want to add the Apple Pay button to your product detail page.

Create ApplePaySession Object

There are two required arguments when creating an **ApplePaySession** object:

- Version number—the API version is 1.
- Payment request—the **PaymentRequest** dictionary contains the information required in order to display the payment form.

When the session is created, call its **begin** method to display the payment form. This method can be called only when invoked by a user's request.

Merchant Validation

When the payment form is displayed, the **onvalidatemerchant** callback function is called and provides a URL to pass to your server for validating the merchant session. Refer to the **Merchant Validation** section.

Payment Confirmation

When the customer confirms the payment by clicking or tapping the Apple Pay button, the **onpaymentauthorized** callback function is called and provides the payment token.

Merchant Decryption

Forward the encrypted payment data to your e-commerce back-end system to decrypt. For information on decryption, see:

https://developer.apple.com/library/ios/documentation/PassKit/Reference/PaymentTokenJSON/PaymentTokenJSON.html#//apple_ref/doc/uid/TP40014929-CH8-SW1

Using the CyberSource API, submit the authorization request and include the decrypted payment data. See "**Option 1: Merchant Decryption**," page 22.

CyberSource Decryption

Forward the encrypted payment data to your e-commerce back-end system.

Using the CyberSource API, submit the authorization request. In the **encryptedPayment_data** field include the Base64 encoded value obtained from the **paymentData** object. [Example 1](#) shows the JavaScript for obtaining this value. See "[Option 2: CyberSource Decryption](#)," page 33.

Example 1 JavaScript for Obtaining a Base64-Encoded Value

```
session.onpaymentauthorized = function (event) {  
  
    var paymentDataString = JSON.stringify(event.payment.token.paymentData);  
  
    var paymentDataBase64 = btoa(paymentDataString);  
  
    ...  
  
}
```

Getting Started

Requirements

- CyberSource account. If you do not already have a CyberSource account, contact your local CyberSource sales representative. You can find your local Sales office here: <http://www.cybersource.com/locations/>
- Merchant account with a supported processor (see [Table 1, "Processors, Card Types, and Optional Features,"](#) on page 18).
- You must have an *Admin* or *Team Agent* user of the [Apple Pay Developer account](#).

Apple Pay relies on payment network tokenization. You can sign up for Apple Pay only if both of the following statements are true:

- Your processor supports payment network tokenization.
- CyberSource supports payment network tokenization with your processor.

If one or both of the preceding statements are not true, you must take one of the following actions before you can sign up for Apple Pay:

- Obtain a new merchant account with a processor that supports payment network tokenization.
 - Wait until your processor supports payment network tokenization.
-

Supported Processors, Card Types, and Optional Features

Note

All optional features, except split shipments, are described in *Payment Network Tokenization Using the Simple Order API* ([PDF](#) | [HTML](#)). Split shipments are described in *Credit Card Services Using the Simple Order API* ([PDF](#) | [HTML](#)).

Table 1 Processors, Card Types, and Optional Features

Processor	Card Types	Optional Features
American Express Direct	American Express	<ul style="list-style-type: none"> ■ Multiple partial captures ■ Recurring payments

Worldpay VAP Worldpay VAP was previously called <i>Little</i> .	Visa, Mastercard	Recurring Payments

Enrolling in Apple Pay

To enroll for Apple Pay:

- Step 1** Log in to the Business Center:
- Test transactions: <https://ebctest.cybersource.com>
 - Live transactions: <https://ebc.cybersource.com>
- a** Under **Account Management** in the left navigation panel, choose **Digital Payment Solutions**.
 - b** Click **Sign Up**. Follow the steps to verify your account information and accept the agreement on the Apple Pay Developers web site.

Step 2 Generate a Certificate Signing Request (CSR).

- a** Enter your **Apple Merchant ID** that you registered in the Certificates, Identifiers and Profiles area of the Member Center on the Apple web site.

**Important**

CyberSource decryption method—[Step b](#) and [Step c](#) are required.

Merchant decryption method—[Step b](#) is required only for saving your Apple Pay merchant ID. The CSR must be obtained directly from Apple.

- b** Click **Generate CSR** to save your Apple Pay merchant ID and to generate a CSR that is associated with your merchant ID.
- c** Submit the CSR to Apple.

Go to the Apple [web site](#) and upload the CSR. Apple provides you with an Apple Pay Certificate for your Apple Merchant ID. For information about adding certificates to your Apple Merchant ID, see the [PassKit Framework Reference](#).

**Important**

A CSR submitted to Apple expires after 25 months. CyberSource recommends generating and submitting a new CSR prior to the expiration date. See "[Generating a New CSR](#)," [page 21](#).

Step 3 Obtain the Apple Pay Certificate.

If you do not have the Apple Pay Certificate, complete the process that is described in the [PassKit Framework Reference](#). The Apple Pay Certificate is required for creating an iOS application. The Apple Pay Certificate is not needed for payment processing with CyberSource.

Step 4 Test your software. See "[Requesting the Authorization Service](#)," [page 22](#).**Note**

If you are using a CyberSource test account, you must connect to the Apple developer system and not to the Apple production system.

**Important**

After you complete your testing, you must create a new CSR for the CyberSource production system, and you must use that CSR for the Apple production system. Until you perform these steps, you cannot enable payments in your iOS application.

Step 5 Repeat Steps 1, 2, 3, and 5 with your CyberSource production account and the Apple production account.

Generating a New CSR

To generate a new CSR:

- Step 1** Log in to the Business Center:
- Test transactions: <https://ebctest.cybersource.com>
 - Live transactions: <https://ebc.cybersource.com>
- Step 2** Under **Account Management** in the left navigation panel, choose **Digital Payment Solutions**.
- Step 3** Click **Enabled**.
- Step 4** Generate a New CSR:
- a** Enter the Apple Merchant ID that you registered in the Certificates, Identifiers, and Profiles area of the Member Center on the Apple web site.
 - b** Click **Generate New CSR**.
- The new CSR replaces the previous CSR in the list. The previous CSR continues to be active until its expiration date (25 months from the date it was generated.)
- c** Download and submit the new CSR to Apple.
-

Single Transaction Report

Go to the Business Center and use the Single Transaction Report to obtain information about your transactions:

- In the Business Center, use the Transaction Search page to identify Apple transactions. You can search for transactions by date, application type, customer name, and other transaction identifiers.
- For information about the Single Transaction Report, see the *Classic Reporting Developer Guide* ([PDF](#) | [HTML](#)).

Requesting the Authorization Service

Option 1: Merchant Decryption

Visa Transaction

To request an authorization for a Visa transaction:

Note

See the [Relaxed Requirements for Address Data and Expiration Date page](#) and "[API Request Fields](#)," page 46, for details and field descriptions.

- Step 1** Set the **card_accountNumber** field to the payment network token value.
- Step 2** Set the **card_expirationMonth** and **card_expirationYear** fields to the values from the payment network token expiration date field.
- Step 3** Set the **ccAuthService_cavv** field to the 3D Secure cryptogram of the payment network token.
- Step 4** Set the **ccAuthService_networkTokenCryptogram** field to the network token cryptogram.
- Step 5** Set the **paymentNetworkToken_transactionType** field to 1.
- Step 6** Set the **ccAuthService_commerceIndicator** field to the ECI value contained in the Apple Pay response payload (5=*vbv* and 7=*internet*).
- Step 7** Set the **paymentSolution** field to 001.

Example 2 Authorization Request (Visa)

```

```

Mastercard Transaction

To request an authorization for a Mastercard transaction:

**Note**

See the [Relaxed Requirements for Address Data and Expiration Date page](#) and "API Request Fields," page 46, for details and field descriptions.

-
- Step 1** Set the **card_accountNumber** field to the payment network token value.
 - Step 2** Set the **card_expirationMonth** and **card_expirationYear** fields to the values from the payment network token expiration date field.
 - Step 3** Set the **ucaf_authenticationData** field to the 3D Secure cryptogram of the payment network token.
 - Step 4** Set the **ccAuthService_networkTokenCryptogram** field to the network token cryptogram.
 - Step 5** Set the **ucaf_collectionIndicator** field to 2.
 - Step 6** Set the **paymentNetworkToken_transactionType** field to 1.

Step 7 Set the `ccAuthService_commerceIndicator` field to ECI value contained in the Apple Pay response payload.

Step 8 Set the `paymentSolution` field to 001.

Example 4 Authorization Request (Mastercard)

```
<requestMessage xmlns="urn:schemas-cybersource-com:transaction-data-1.121">
  <merchantID>demomerchant</merchantID>
  <merchantReferenceCode>demorefnum</merchantReferenceCode>
  <billTo>
    <firstName>Jane</firstName>
    <lastName>Smith</lastName>
    <street1>123 Main Street</street1>
    <city>Small Town</city>
    <state>CA</state>
    <postalCode>98765</postalCode>
    <country>US</country>
    <email>jsmith@example.com</email>
  </billTo>
  <purchaseTotals>
    <currency>USD</currency>
    <grandTotalAmount>5.00</grandTotalAmount>
  </purchaseTotals>
  <card>
    <accountNumber>5555555555554444</accountNumber>
    <expirationMonth>12</expirationMonth>
    <expirationYear>2020</expirationYear>
    <cvNumber>123</cvNumber>
    <cardType>002</cardType>
  </card>
  <ucaf>
    <authenticationData>ABCDEFabcdefABCDscdef0987654321234567</authenticationData>
    <collectionIndicator>2</collectionIndicator>
  </ucaf>
  <ccAuthService run="true">
    <commerceIndicator>spa</commerceIndicator>
  </ccAuthService>
  <paymentNetworkToken>
    <transactionType>1</transactionType>
  </paymentNetworkToken>
  <paymentSolution>001</paymentSolution>
</requestMessage>
```

Example 5 Authorization Response (Mastercard)

```

<c:replyMessage>
  <c:merchantReferenceCode>demorefnum</c:merchantReferenceCode>
  <c:requestID>4465840340765000001541</c:requestID>
  <c:decision>ACCEPT</c:decision>
  <c:reasonCode>100</c:reasonCode>
  <c:requestToken>Ahj/7wSR5C/4Icd2fdAKakGLadfg5535r/ghx3Z90AoBj3u</c:requestToken>
  <c:purchaseTotals>
    <c:currency>USD</c:currency>
  </c:purchaseTotals>
  <c:ccAuthReply>
    <c:reasonCode>100</c:reasonCode>
    <c:amount>5.00</c:amount>
    <c:authorizationCode>888888</c:authorizationCode>

  </c:ccAuthReply>
</c:replyMessage>

```

American Express Transaction

To request an authorization for an American Express transaction:

**Note**

See the [Relaxed Requirements for Address Data and Expiration Date page](#) and "API Request Fields," page 46, for details and field descriptions.

- Step 1** Set the **card_accountNumber** field to the payment network token value.
- Step 2** Set the **card_expirationMonth** and **card_expirationYear** fields to the values from the payment network token expiration date field.
- Step 3** Set the **ccAuthService_cavv** field to the 3D Secure cryptogram of the payment network token.

**Important**

Include the whole 20-byte cryptogram in the **ccAuthService_cavv** field. For a 40-byte cryptogram, split the cryptogram into two 20-byte binary values (block A and block B). Set the **ccAuthService_cavv** field to the block A value and set the **ccAuthService_xid** field to the block B value.

- Step 4** Set the `ccAuthService_networkTokenCryptogram` field to the network token cryptogram.
- Step 5** Set the `paymentNetworkToken_transactionType` field to 1.
- Step 6** Set the `ccAuthService_commerceIndicator` field to ECI value contained in the Apple Pay response payload.
- Step 7** Set the `paymentSolution` field to 001.

Example 6 Authorization Request (American Express)

```

<requestMessage xmlns="urn:schemas-cybersource-com:transaction-data-1.121">
  <merchantID>demomerchant</merchantID>
  <merchantReferenceCode>demorefnum</merchantReferenceCode>
  <billTo>
    <firstName>Jane</firstName>
    <lastName>Smith</lastName>
    <street1>123 Main Street</street1>
    <city>Small Town</city>
    <state>CA</state>
    <postalCode>98765</postalCode>
    <country>US</country>
    <email>jsmith@example.com</email>
  </billTo>
  <purchaseTotals>
    <currency>USD</currency>
    <grandTotalAmount>5.00</grandTotalAmount>
  </purchaseTotals>
  <card>
    <accountNumber>378282246310005</accountNumber>
    <expirationMonth>12</expirationMonth>
    <expirationYear>2020</expirationYear>
    <cvNumber>123</cvNumber>
    <cardType>003</cardType>
  </card>
  <ccAuthService run="true">
    <cavv>ABCDEFabcdefABCDEFabcdef0987654321234567</cavv>
    <commerceIndicator>aesk</commerceIndicator>
  </ccAuthService>
  <paymentNetworkToken>
    <transactionType>1</transactionType>
  </paymentNetworkToken>
  <paymentSolution>001</paymentSolution>
</requestMessage>

```

Example 7 Authorization Response (American Express)

```

<c:replyMessage>
  <c:merchantReferenceCode>demorefnum</c:merchantReferenceCode>
  <c:requestID>4465840340765000001541</c:requestID>
  <c:decision>ACCEPT</c:decision>
  <c:reasonCode>100</c:reasonCode>
  <c:requestToken>Ahj/7wSR5C/4Icd2fdAKakGLadfg5535r/ghx3Z90AoBj3u</c:requestToken>

</c:replyMessage>

```

Discover Transaction

To request an authorization for a Discover transaction:

**Note**

See the [Relaxed Requirements for Address Data and Expiration Date page](#) and "API Request Fields," page 46, for details and field descriptions.

-
- Step 1** Set the **card_accountNumber** field to the payment network token value.
 - Step 2** Set the **card_expirationMonth** and **card_expirationYear** fields to the values from the payment network token expiration date field.
 - Step 3** Set the **ccAuthService_cavv** field to the 3D Secure cryptogram of the payment network token.
 - Step 4** Set the **ccAuthService_networkTokenCryptogram** field to the network token cryptogram.
 - Step 5** Set the **paymentNetworkToken_transactionType** field to 1.

Step 6 Set the `ccAuthService_commerceIndicator` field to ECI value contained in the Apple Pay response payload.

Step 7 Set the `paymentSolution` field to 001.

Example 8 Authorization Request (Discover)

```
<requestMessage xmlns="urn:schemas-cybersource-com:transaction-data-1.121">
  <merchantID>demomerchant</merchantID>
  <merchantReferenceCode>demorefnum</merchantReferenceCode>
  <billTo>
    <firstName>Jane</firstName>
    <lastName>Smith</lastName>
    <street1>123 Main Street</street1>
    <city>Small Town</city>
    <state>CA</state>
    <postalCode>98765</postalCode>
    <country>US</country>
    <email>jsmith@example.com</email>
  </billTo>
  <purchaseTotals>
    <currency>USD</currency>
    <grandTotalAmount>5.00</grandTotalAmount>
  </purchaseTotals>
  <card>
    <accountNumber>6011111111111117</accountNumber>
    <expirationMonth>12</expirationMonth>
    <expirationYear>2020</expirationYear>
    <cvNumber>123</cvNumber>
    <cardType>004</cardType>
  </card>
  <ccAuthService run="true">
    <cavv>ABCDEFabcdefABCDEFabcdef0987654321234567</cavv>
    <commerceIndicator>dipb</commerceIndicator>
  </ccAuthService>
  <paymentNetworkToken>
    <transactionType>1</transactionType>
  </paymentNetworkToken>
  <paymentSolution>001</paymentSolution>
</requestMessage>
```

Example 9 Authorization Response (Discover)

```

<c:replyMessage>
  <c:merchantReferenceCode>demorefnum</c:merchantReferenceCode>
  <c:requestID>4465840340765000001541</c:requestID>

JCB Transaction

To request an authorization for a JCB transaction:

**Note**

See the [Relaxed Requirements for Address Data and Expiration Date](#) page and "API Request Fields," page 46, for details and field descriptions.

-
- Step 1** Set the **card_accountNumber** field to the payment network token value.
 - Step 2** Set the **card_expiration_Month** and **card_expirationYear** fields to the values from the payment network token expiration date field.
 - Step 3** Set the **ccAuthService_cavv** field to the 3D Secure cryptogram of the payment network token.
 - Step 4** Set the **paymentNetworkToken_transactionType** field to 1.
 - Step 5** Set the **ccAuthService_eciRaw** field to the ECI value contained in the Apple Pay response payload.
 - Step 6** Set the **PaymentSolution** field to 001.

Example 10 Authorization Request (JCB)

```

<requestMessage xmlns="urn:schemas-cybersource-com:transaction-data-1.121">
  <merchantID>demomerchant</merchantID>
  <merchantReferenceCode>demorefnum</merchantReferenceCode>
  <billTo>
    <firstName>Jane</firstName>
    <lastName>Smith</lastName>
    <street1>123 Main Street</street1>
    <city>Small Town</city>
    <state>CA</state>
    <postalCode>98765</postalCode>
    <country>US</country>
    <email>jsmith@example.com</email>
  </billTo>
  <purchaseTotals>
    <currency>USD</currency>
    <grandTotalAmount>5.00</grandTotalAmount>
  </purchaseTotals>
  <card>
    <accountNumber>3566111111111113</accountNumber>
    <expirationMonth>12</expirationMonth>
    <expirationYear>2020</expirationYear>
    <cvNumber>123</cvNumber>
    <cardType>001</cardType>
  </card>
  <ccAuthService run="true">
    <cavv>ABCDEFabcdefABCDEFabcdef0987654321234567</cavv>
    <eciRaw>5</eciRaw>
  </ccAuthService>
  <paymentNetworkToken>
    <transactionType>1</transactionType>
  </paymentNetworkToken>
  <paymentSolution>001</paymentSolution>
</requestMessage>

```

Example 11 Authorization Reply (JCB)

```

Option 2: CyberSource Decryption

Visa Transaction

To request an authorization for a Visa transaction:

**Note**

See the [Relaxed Requirements for Address Data and Expiration Date](#) page and ["API Request Fields,"](#) page 46, for details and field descriptions.

- Step 1** Set the **encryptedPayment_data** field to the Base64 encoded value obtained from the **paymentData** property of the **PKPaymentToken** object. See [page 11](#).
- Step 2** Set the **encryptedPayment_descriptor** field to:
Rk1EPUNPTU1PTi5BUFBMRS5JTkFQUC5QQV1NRU5U
- Step 3** Set the **paymentSolution** field to 001.

Example 14 Authorization Request (Visa)

```

<requestMessage xmlns="urn:schemas-cybersource-com:transaction-data-1.121">
  <merchantID>demomerchant</merchantID>
  <merchantReferenceCode>demorefnum</merchantReferenceCode>
  <billTo>
    <firstName>Jane</firstName>
    <lastName>Smith</lastName>
    <street1>123 Main Street</street1>
    <city>Small Town</city>
    <state>CA</state>
    <postalCode>98765</postalCode>
    <country>US</country>
    <email>jsmith@example.com</email>
  </billTo>
  <purchaseTotals>
    <currency>USD</currency>
    <grandTotalAmount>5.00</grandTotalAmount>
  </purchaseTotals>
  <encryptedPayment>
    <descriptor>RklEPUNPTU1PTi5BUFBMRS5JTkFQUC5QQVlNRU5U</descriptor>
    <data>ABCDEFabcdefABCDEFabcdef0987654321234567</data>
    <encoding>Base64</encoding>
  </encryptedPayment>
  <card>
    <cardType>001</cardType>
  </card>
  <ccAuthService run="true"/>
  <paymentSolution>001</paymentSolution>
</requestMessage>

```

Example 15 Authorization Response (Visa)

```

<c:replyMessage>
  <c:merchantReferenceCode>demorefnum</c:merchantReferenceCode>
  <c:requestID>4465840340765000001541</c:requestID>

```

Mastercard Transaction

To request an authorization for a Mastercard transaction:

Note

See the [Relaxed Requirements for Address Data and Expiration Date](#) page and ["API Request Fields,"](#) page 46, for details and field descriptions.

- Step 1** Set the `encryptedPayment_data` field to the Base64 encoded value obtained from the `paymentData` property of the `PKPaymentToken` object. See [page 11](#).
- Step 2** Set the `encryptedPayment_descriptor` field to:
RklEPUNPTU1PTi5BUFBMRS5JTkFQUC5QQVlNRU5U
- Step 3** Set the `paymentSolution` field to 001.

Example 16 Authorization Request (Mastercard)

```
<requestMessage xmlns="urn:schemas-cybersource-com:transaction-data-1.121">
  <merchantID>demomerchant</merchantID>
  <merchantReferenceCode>demorefnum</merchantReferenceCode>
  <billTo>
    <firstName>Jane</firstName>
    <lastName>Smith</lastName>
    <street1>123 Main Street</street1>
    <city>Small Town</city>
    <state>CA</state>
    <postalCode>98765</postalCode>
    <country>US</country>
    <email>jsmith@example.com</email>
  </billTo>
  <purchaseTotals>
    <currency>USD</currency>
    <grandTotalAmount>5.00</grandTotalAmount>
  </purchaseTotals>
  <encryptedPayment>
    <descriptor>RklEPUNPTU1PTi5BUFBMRS5JTkFQUC5QQVlNRU5U</descriptor>
    <data>ABCDEFabcdefABCDEFabcdef0987654321234567</data>
    <encoding>Base64</encoding>
  </encryptedPayment>
  <card>
    <cardType>002</cardType>
  </card>
  <ccAuthService run="true"/>
  <paymentSolution>001</paymentSolution>
</requestMessage>
```

Example 17 Authorization Response (Mastercard)

```

<c:replyMessage>
  <c:merchantReferenceCode>demorefnum</c:merchantReferenceCode>
  <c:requestID>4465840340765000001541</c:requestID>

American Express Transaction

To request an authorization for an American Express transaction:

Note

See the [Relaxed Requirements for Address Data and Expiration Date page](#) and ["API Request Fields," page 46](#), for details and field descriptions.

- Step 1** Set the `encryptedPayment_data` field to the Base64 encoded value obtained from the `paymentData` property of the `PKPaymentToken` object. See [page 11](#).
- Step 2** Set the `encryptedPayment_descriptor` field to:
RklEPUNPTU1PTi5BUFBMRS5JTkFQUC5QQVlNRU5U
- Step 3** Set the `paymentSolution` field to 001.

Example 18 Authorization Request (American Express)

```
<requestMessage xmlns="urn:schemas-cybersource-com:transaction-data-1.121">
  <merchantID>demomerchant</merchantID>
  <merchantReferenceCode>demorefnum</merchantReferenceCode>
  <billTo>
    <firstName>Jane</firstName>
    <lastName>Smith</lastName>
    <street1>123 Main Street</street1>
    <city>Small Town</city>
    <state>CA</state>
    <postalCode>98765</postalCode>
    <country>US</country>
    <email>jsmith@example.com</email>
  </billTo>
  <purchaseTotals>
    <currency>USD</currency>
    <grandTotalAmount>5.00</grandTotalAmount>
  </purchaseTotals>
  <encryptedPayment>
    <descriptor>RklEPUNPTU1PTi5BUFBMRS5JTkFQUC5QQVlNRU5U</descriptor>
    <data>ABCDEFabcdefABCDEFabcdef0987654321234567</data>
    <encoding>Base64</encoding>
  </encryptedPayment>
  <card>
    <cardType>003</cardType>
  </card>
  <ccAuthService run="true"/>
  <paymentSolution>001</paymentSolution>
</requestMessage>
```

Example 19 Authorization Response (American Express)

```

<c:replyMessage>
  <c:merchantReferenceCode>demorefnum</c:merchantReferenceCode>
  <c:requestID>4465840340765000001541</c:requestID>
  <c:decision>ACCEPT</c:decision>
  <c:reasonCode>100</c:reasonCode>

```

Discover Transaction

To request an authorization for a Discover transaction:

Note

See the [Relaxed Requirements for Address Data and Expiration Date](#) page and "API Request Fields," page 46, for details and field descriptions.

- Step 1** Set the `encryptedPayment_data` field to the Base64 encoded value obtained from the `paymentData` property of the `PKPaymentToken` object. See [page 11](#).
- Step 2** Set the `encryptedPayment_descriptor` field to:
RklEPUNPTU1PTi5BUFBMRS5JTkFQUC5QQVlNRU5U
- Step 3** Set the `paymentSolution` field to 001.

Example 20 Authorization Request (Discover)

```
<requestMessage xmlns="urn:schemas-cybersource-com:transaction-data-1.121">
  <merchantID>demomerchant</merchantID>
  <merchantReferenceCode>demorefnum</merchantReferenceCode>
  <billTo>
    <firstName>Jane</firstName>
    <lastName>Smith</lastName>
    <street1>123 Main Street</street1>
    <city>Small Town</city>
    <state>CA</state>
    <postalCode>98765</postalCode>
    <country>US</country>
    <email>jsmith@example.com</email>
  </billTo>
  <purchaseTotals>
    <currency>USD</currency>
    <grandTotalAmount>5.00</grandTotalAmount>
  </purchaseTotals>
  <encryptedPayment>
    <descriptor>RklEPUNPTU1PTi5BUFBMRS5JTkFQUC5QQVlNRU5U</descriptor>
    <data>ABCDEFabcdefABCDEFabcdef0987654321234567</data>
    <encoding>Base64</encoding>
  </encryptedPayment>
  <card>
    <cardType>004</cardType>
  </card>
  <paymentNetworkToken>
    <transactionType>1</transactionType>
  </paymentNetworkToken>
  <paymentSolution>001</paymentSolution>
  <ccAuthService run="true"/>
</requestMessage>
```

Example 21 Authorization Response (Discover)

```

<c:replyMessage>
  <c:merchantReferenceCode>demorefnum</c:merchantReferenceCode>
  <c:requestID>4465840340765000001541</c:requestID>
  <c:decision>ACCEPT</c:decision>
  <c:reasonCode>100</c:reasonCode>
  <c:requestToken>Ahj/7wSR5C/4Icd2fdAKakGLadfg5535r/ghx3Z90AoBj3u</c:requestToken>
  <c:token>
    <c:expirationMonth>07</c:expirationMonth>
    <c:expirationYear>2025</c:expirationYear>
    <c:prefix>239845</c:prefix>
    <c:suffix>2947</c:suffix>
  </c:token>
  <c:purchaseTotals>
    <c:currency>USD</c:currency>
  </c:purchaseTotals>
  <c:ccAuthReply>
    <c:reasonCode>100</c:reasonCode>
    <c:amount>5.00</c:amount>
    <c:authorizationCode>888888</c:authorizationCode>
    <c:avsCode>X</c:avsCode>
    <c:avsCodeRaw>I1</c:avsCodeRaw>
    <c:authorizedDateTime>2015-11-03T20:53:54Z</c:authorizedDateTime>
    <c:processorResponse>100</c:processorResponse>
    <c:reconciliationID>11267051CGJSMQDC</c:reconciliationID>
  </c:ccAuthReply>
</c:replyMessage>

```

JCB Transaction

To request an authorization for a JCB transaction:

**Note**

See the [Relaxed Requirements for Address Data and Expiration Date](#) page and "[API Request Fields](#)," page 46, for details and field descriptions.

- Step 1** Set the **encryptedPayment_data** field to the base64 encoded value obtained from the **paymentData** property of the **PKPaymentToken** object.
- Step 2** Set the **encryptedPaymentdescriptor** field to `Rk1EPUNPTU1PTi5BUFBMRS5JTtkFQUC5QQV1NRU5U`.
- Step 3** Set the **paymentSolution** field to `001`.

Example 22 Authorization Request (JCB)

```
<requestMessage xmlns="urn:schemas-cybersource-com:transaction-data-1.121">
  <merchantID>demomerchant</merchantID>
  <merchantReferenceCode>demorefnum</merchantReferenceCode>
  <billTo>
    <firstName>Jane</firstName>
    <lastName>Smith</lastName>
    <street1>123 Main Street</street1>
    <city>Small Town</city>
    <state>CA</state>
    <postalCode>98765</postalCode>
    <country>US</country>
    <email>jsmith@example.com</email>
  </billTo>
  <purchaseTotals>
    <currency>USD</currency>
    <grandTotalAmount>5.00</grandTotalAmount>
  </purchaseTotals>
  <encryptedPayment>
    <descriptor>RklEPUNPTU1PTi5BUFBMRS5JTkFQUC5QQV1NRU5U</descriptor>
    <data>ABCDEFabcdefABCDEFabcdef0987654321234567</data>
    <encoding>Base64</encoding>
  </encryptedPayment>
  <card>
    <cardType>001</cardType>
  </card>
  <ccAuthService run="true"/>
  <paymentSolution>001</paymentSolution>
</requestMessage>
```

Example 23 Authorization Reply (JCB)

```

<c:replyMessage>
  <c:merchantReferenceCode>demorefnum</c:merchantReferenceCode>
  <c:requestID>4465840340765000001541</c:requestID>
  <c:decision>ACCEPT</c:decision>
  <c:reasonCode>100</c:reasonCode>
  <c:requestToken>
    Ahj/7wSR5C/4Icd2fdAKakGLadfg5535r/ghx3Z90AoBj3u
  </c:requestToken>
  <c:token>
    <c:expirationMonth>07</c:expirationMonth>
    <c:expirationYear>2025</c:expirationYear>
    <c:prefix>239845</c:prefix>
    <c:suffix>2947</c:suffix>
  </c:token>
  <c:purchaseTotals>
    <c:currency>USD</c:currency>
  </c:purchaseTotals>
  <c:ccAuthReply>
    <c:reasonCode>100</c:reasonCode>
    <c:amount>5.00</c:amount>
    <c:authorizationCode>888888</c:authorizationCode>
    <c:avsCode>X</c:avsCode>
    <c:avsCodeRaw>I1</c:avsCodeRaw>
    <c:processorResponse>100</c:processorResponse>
    <c:reconciliationID>11267051CGJSMQDC</c:reconciliationID>

</c:replyMessage>

```

Additional CyberSource Services

For information on how to request these follow-on services, refer to [Credit Card Services Using the Simple Order API](#).

Table 2 CyberSource Services

CyberSource Service	Description
Capture	A follow-on service that uses the request ID returned from the previous authorization. The request ID links the capture to the authorization. This service transfers funds from the customer's account to your bank and usually takes two to four days to complete.
Sale	A sale is a bundled authorization and capture. Request the authorization and capture services at the same time. CyberSource processes the capture immediately.
Auth Reversal	A follow-on service that uses the request ID returned from the previous authorization. An auth reversal releases the hold that the authorization placed on the customer's credit card funds. Use this service to reverse an unnecessary or undesired authorization.

API Fields

Data Type Definitions

For more information about these data types, see the [World Wide Web Consortium \(W3C\) XML Schema Part 2: Datatypes Second Edition](#).

Table 3 Data Type Definitions

Data Type	Description
Integer	Whole number {..., -3, -2, -1, 0, 1, 2, 3, ...}
String	Sequence of letters, numbers, spaces, and special characters

Numbered Elements

The CyberSource XML schema includes several numbered elements. You can include these complex elements more than once in a request. For example, when a customer order includes more than one item, you must include multiple `<item>` elements in your request. Each item is numbered, starting with 0. The XML schema uses an `id` attribute in the item's opening tag to indicate the number. For example:

```
<item id="0">
```

As a name-value pair field name, this tag is represented as **item_0**. In this portion of the field name, the underscore before the number does not indicate hierarchy in the XML schema. The item fields are generically referred to as **item_#_<element name>** in the documentation.

Below is an example of the numbered `<item>` element and the corresponding name-value pair field names. If you are using SOAP, the client contains a corresponding `Item` class.

Example 24 **Numbered XML Schema Element Names and Name-Value Pair Field Names**

XML Schema Element Names	Corresponding Name-Value Pair Field Names
<pre><item id="0"> <unitPrice> <quantity> </item></pre>	<pre>item_0_unitPrice item_0_quantity</pre>
<pre><item id="1"> <unitPrice> <quantity> </item></pre>	<pre>item_1_unitPrice item_1_quantity</pre>

When a request is in XML format and includes an `<item>` element, the element must include an `id` attribute. For example: `<item id="0">`.

Relaxed Requirements for Address Data and Expiration Date

To enable relaxed requirements for address data and expiration date, contact CyberSource Customer Support to have your account configured for this feature. For details about relaxed requirements, see the [Relaxed Requirements for Address Data and Expiration Date](#) page.

API Request Fields

Note

Unless otherwise noted, all field names are case sensitive and all fields accept special characters such as @, #, and %.

Table 4 Request Fields

Field	Description	Used By: Required (R) or Optional (O)	Data Type (Length)
billTo_city	City of the billing address.	ccAuthService (R) ²	String (50)
billTo_country	Country of the billing address. Use the two-character ISO Standard Country Codes .	ccAuthService (R) ²	String (2)
billTo_email	Customer's email address.	ccAuthService (R) ²	String (255)
billTo_firstName	Customer's first name. For a credit card transaction, this name must match the name on the card.	ccAuthService (R) ²	String (60)
billTo_lastName	Customer's last name. For a credit card transaction, this name must match the name on the card.	ccAuthService (R) ²	String (60)
billTo_phoneNumber	Customer's phone number. CyberSource recommends that you include the country code when the order is from outside the U.S.	ccAuthService (O)	String (15)

- 1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to CyberSource. CyberSource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment card companies.
- 2 This field is optional if your CyberSource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 45. **Important** It is your responsibility to determine whether a field is required for the transaction you are requesting.

Table 4 Request Fields (Continued)

Field	Description	Used By: Required (R) or Optional (O)	Data Type (Length)
billTo_postalCode	<p>Postal code for the billing address. The postal code must consist of 5 to 9 digits.</p> <p>When the billing country is the U.S., the 9-digit postal code must follow this format: [5 digits][dash][4 digits]</p> <p>Example 12345-6789</p> <p>When the billing country is Canada, the 6-digit postal code must follow this format: [alpha][numeric][alpha][space] [numeric][alpha][numeric]</p> <p>Example A1B 2C3</p>	ccAuthService (R) ²	String (9)
billTo_state	<p>State or province of the billing address. For an address in the U.S. or Canada, use the State, Province, and Territory Codes for the United States and Canada.</p>	ccAuthService (R) ²	String (2)
billTo_street1	<p>First line of the billing street address.</p>	ccAuthService (R) ²	String (60)
billTo_street2	<p>Additional address information.</p> <p>Example Attention: Accounts Payable</p>	ccAuthService (O)	String (60)
card_accountNumber	<p>The payment network token value.</p>	ccAuthService (R)	Nonnegative integer (20)
card_cardType	<p>Type of card to authorize. Possible values:</p> <ul style="list-style-type: none"> ■ 001: Visa ■ 002: Mastercard ■ 003: American Express ■ 004: Discover 	ccAuthService (R)	String (3)
card_cvNumber	<p>CVN.</p>	ccAuthService (R)	Nonnegative integer (4)
card_expirationMonth	<p>Two-digit month in which the payment network token expires.</p> <p>Format: MM.</p> <p>Possible values: 01 through 12.</p>	ccAuthService (R)	String (2)

1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to CyberSource. CyberSource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment card companies.

2 This field is optional if your CyberSource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 45. **Important** It is your responsibility to determine whether a field is required for the transaction you are requesting.

Table 4 Request Fields (Continued)

Field	Description	Used By: Required (R) or Optional (O)	Data Type (Length)
card_expirationYear	Four-digit year in which the payment network token expires. Format: YYYY.	ccAuthService (R)	Nonnegative integer (4)
ccAuthService_cavv	<p>Visa Cryptogram for payment network tokenization transactions. The value for this field must be 28-character Base64 or 40-character hex binary. All cryptograms use one of these formats.</p> <p>American Express For a 20-byte cryptogram, set this field to the cryptogram for payment network tokenization transactions. For a 40-byte cryptogram, set this field to block A of the cryptogram for payment network tokenization transactions. The value for this field must be 28-character Base64 or 40-character hex binary. All cryptograms use one of these formats.</p> <p>Discover Cryptogram for payment network tokenization transactions. The value for this field can be a 20 or 40-character hex binary. All cryptograms use one of these formats.</p> <p>CyberSource through VisaNet The value for this field corresponds to the following data in the TC 33 capture file¹:</p> <ul style="list-style-type: none"> ■ Record: CP01 TCR8 ■ Position: 77-78 ■ Field: CAVV version and authentication action. 	ccAuthService (R)	String (40)

1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to CyberSource. CyberSource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment card companies.

2 This field is optional if your CyberSource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 45. **Important** It is your responsibility to determine whether a field is required for the transaction you are requesting.

Table 4 Request Fields (Continued)

Field	Description	Used By: Required (R) or Optional (O)	Data Type (Length)
ccAuthService_ commerceIndicator	<p>For a payment network tokenization transaction.</p> <p>The values are required for the merchant decryption method (see "Option 1: Merchant Decryption," page 22).</p> <p>Possible values:</p> <ul style="list-style-type: none"> ■ aesk: American Express card type ■ spa: Mastercard card type ■ vbv: Visa card type mapped for Apple Pay transactions with eCommerce commerce indicator of 5 ■ internet: Visa card type mapped for Apple Pay transactions with eCommerce commerce indicator of 7 ■ dipb: Discover card type 	ccAuthService (See description)	String (20)
ccAuthService_ directoryServerTrans actionID	Identifier generated during the authentication transaction by the Mastercard Directory Server and passed back with the authentication results.	ccAuthService (O)	String (36)
ccAuthService_eciRaw	Raw electronic commerce indicator (ECI).	ccAuthService (O)	String (2)
ccAuthService_ networkTokenCryptogram	<p>Token authentication verification value cryptogram. For token-based transactions with 3D Secure or SecureCode, you must submit both types of cryptograms: network token and 3D Secure/ SecureCode.</p> <p>The value for this field must be 28-character Base64 or 40-character hex binary. All cryptograms use one of these formats.</p>	ccAuthService (O)	String (40)
ccAuthService_ paSpecificationVersion	The 3D Secure version that you used for Secured Consumer Authentication (SCA); for example, 3D Secure 1.0.2 or 2.0.0.	ccAuthService (O)	String (20)
ccAuthService_run	<p>Whether to include ccAuthService in your request.</p> <p>Possible values:</p> <ul style="list-style-type: none"> ■ TRUE: Include the service in your request. ■ FALSE (default): Do not include the service in your request. 	ccAuthService (R)	
<p>1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to CyberSource. CyberSource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment card companies.</p> <p>2 This field is optional if your CyberSource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 45. Important It is your responsibility to determine whether a field is required for the transaction you are requesting.</p>			

Table 4 Request Fields (Continued)

Field	Description	Used By: Required (R) or Optional (O)	Data Type (Length)
ccAuthService_xid	<p>Visa Cryptogram for payment network tokenization transactions. The value for this field must be 28-character Base64 or 40-character hex binary. All cryptograms use one of these formats.</p> <p>American Express For a 20-byte cryptogram, set this field to the cryptogram for payment network tokenization transactions. For a 40-byte cryptogram, set this field to block A of the cryptogram for payment network tokenization transactions (see page 26). The value for this field must be 28-character Base64 or 40-character hex binary. All cryptograms use one of these formats.</p>	ccAuthService (R)	String (40)
encryptedPayment_data	<p>The encrypted payment data value.</p> <p>Populate this field with the encrypted payment data value obtained from the paymentData property of the PKPaymentToken object. See the PassKit Framework Reference.</p>	ics_auth (R)	
encryptedPayment_descriptor	<p>Format of the encrypted payment data. The value for Apple Pay is:</p> <p>Rk1EPUNPTU1PTi5BUFBMRS5JTkFQUC5QQV1NRU5U</p>	ics_auth (R)	String (128)
encryptedPayment_encoding	<p>Encoding method used to encrypt the payment data:</p> <p>Base64</p>	ics_auth (R)	String (6)
item_#_productCode	<p>Type of product. This value is used to determine the product category: electronic, handling, physical, service, or shipping. The default is <code>default</code>.</p> <p>See "Numbered Elements," page 44.</p>	ccAuthService (O)	String (255)
item_#_productName	<p>Name of the product.</p> <p>This field is required when the item_#_productCode value is not <code>default</code> or one of the values related to shipping and/or handling.</p> <p>See "Numbered Elements," page 44.</p>	ccAuthService (See description)	String (255)
<p>1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to CyberSource. CyberSource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment card companies.</p> <p>2 This field is optional if your CyberSource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 45. Important It is your responsibility to determine whether a field is required for the transaction you are requesting.</p>			

Table 4 Request Fields (Continued)

Field	Description	Used By: Required (R) or Optional (O)	Data Type (Length)
item_#_productSKU	<p>Identification code for the product.</p> <p>This field is required when the item_#_productCode value is not <code>default</code> or one of the values related to shipping and/or handling.</p> <p>See "Numbered Elements," page 44.</p>	ccAuthService (See description)	String (255)
item_#_quantity	<p>The default is 1.</p> <p>This field is required when the item_#_productCode value is not <code>default</code> or one of the values related to shipping and/or handling.</p> <p>See "Numbered Elements," page 44.</p>	ccAuthService (See description)	Integer (10)
item_#_taxAmount	<p>Total tax to apply to the product. This value cannot be negative.</p> <p>See "Numbered Elements," page 44.</p>	ccAuthService (See description)	String (15)
item_#_unitPrice	<p>Per-item price of the product. This value cannot be negative. You can include a decimal point (.), but you cannot include any other special characters.</p> <p>See "Numbered Elements," page 44.</p>	ccAuthService (See description)	String (15)
merchantID	Your CyberSource merchant ID. Use the same merchant ID for evaluation, testing, and production.	ccAuthService (R)	String (30)
merchantReferenceCode	<p>Merchant-generated order reference or tracking number. CyberSource recommends that you send a unique value for each transaction so that you can perform meaningful searches for the transaction. For information about tracking orders, see Getting Started with CyberSource Advanced for the Simple Order API.</p>	ccAuthService (R)	String (50)
paymentNetworkToken_assuranceLevel	<p>Confidence level of the tokenization. This value is assigned by the token service provider.</p> <p>Note This field is supported only for CyberSource through VisaNet and FDC Nashville Global.</p>	ccAuthService (O)	String (2)
<p>1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to CyberSource. CyberSource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment card companies.</p> <p>2 This field is optional if your CyberSource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 45. Important It is your responsibility to determine whether a field is required for the transaction you are requesting.</p>			

Table 4 Request Fields (Continued)

Field	Description	Used By: Required (R) or Optional (O)	Data Type (Length)
paymentNetworkToken_ deviceTechType	Type of technology used in the device to store token data. Possible value: 001: Secure Element (SE) Smart card or memory with restricted access and encryption to prevent data tampering. For storing payment credentials, a SE is tested against a set of requirements defined by the payment networks. Note This field is supported only for FDC Compass.	ccAuthService (O)	Integer (3)
paymentNetworkToken_ requestorID	Value that identifies your business and indicates that the cardholder's account number is tokenized. This value is assigned by the token service provider and is unique within the token service provider's database. Note This field is supported only for CyberSource through VisaNet, FDC Nashville Global, and Chase Paymentech Solutions.	ccAuthService (O)	String (11)
paymentNetworkToken_ transactionType	Type of transaction that provided the token data. This value does not specify the token service provider; it specifies the entity that provided you with information about the token. Set the value for this field to 1.	ccAuthService (R)	String (1)
paymentSolution	Identifies Apple Pay as the payment solution that is being used for the transaction: Set the value for this field to 001. Note This unique ID differentiates digital solution transactions within the CyberSource platform for reporting purposes.	ccAuthService (R)	String (3)
purchaseTotals_ currency	Currency used for the order: USD	ccAuthService (R)	String (5)
purchaseTotals_ grandTotalAmount	Grand total for the order. This value cannot be negative. You can include a decimal point (.), but you cannot include any other special characters. CyberSource truncates the amount to the correct number of decimal places.	ccAuthService (R)	Decimal (60)
ucaf_ authenticationData	Cryptogram for payment network tokenization transactions with Mastercard.	ccAuthService (R)	String (32)
<p>1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to CyberSource. CyberSource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment card companies.</p> <p>2 This field is optional if your CyberSource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 45. Important It is your responsibility to determine whether a field is required for the transaction you are requesting.</p>			

Table 4 Request Fields (Continued)

Field	Description	Used By: Required (R) or Optional (O)	Data Type (Length)
ucaf_collectionIndicator	Required field for payment network tokenization transactions with Mastercard. Set the value for this field to 2.	ccAuthService (R)	String with numbers only (1)
	<ol style="list-style-type: none"> The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to CyberSource. CyberSource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment card companies. This field is optional if your CyberSource account is configured for relaxed requirements for address data and expiration date. See "Relaxed Requirements for Address Data and Expiration Date," page 45. Important It is your responsibility to determine whether a field is required for the transaction you are requesting. 		

API Reply Fields

Important

Because CyberSource can add reply fields and reason codes at any time:

- You must parse the reply data according to the names of the fields instead of the field order in the reply. For more information about parsing reply fields, see the documentation for your client.
- Your error handler should be able to process new reason codes without problems.
- Your error handler should use the **decision** field to determine the result if it receives a reply flag that it does not recognize.

Note

Your payment processor can include additional API reply fields that are not documented in this guide. See [Credit Card Services Using the Simple Order API](#) for detailed descriptions of additional API reply fields.

Table 5 Reply Fields

Field	Description	Returned By	Data Type & Length
card_suffix	<p>Last four digits of the cardholder's account number. This field is returned only for tokenized transactions. You can use this value on the receipt that you give to the cardholder.</p> <p>Note This field is returned only for CyberSource through VisaNet and FDC Nashville Global.</p> <p>CyberSource through VisaNet The value for this field corresponds to the following data in the TC 33 capture file¹:</p> <ul style="list-style-type: none"> ■ Record: CP01 TCRB ■ Position: 85 ■ Field: American Express last 4 PAN return indicator. 	ccAuthReply	String (4)
ccAuthReply_amount	Amount that was authorized.	ccAuthReply	String (15)
ccAuthReply_authorizationCode	Authorization code. Returned only when the processor returns this value.	ccAuthReply	String (7)
ccAuthReply_authorizedDateTime	<p>Time of authorization.</p> <p>Format: YYYY-MM-DDThh:mm:ssZ</p> <p>Example: 2019-08-11T22:47:57Z equals August 11, 2019, at 22:47 (10:47:57 p.m.). The T separates the date and the time. The Z indicates UTC.</p>	ccAuthReply	String (20)

¹ The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to CyberSource. CyberSource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment card companies.

Table 5 Reply Fields (Continued)

Field	Description	Returned By	Data Type & Length
ccAuthReply_avsCode	AVS results. See Credit Card Services Using the Simple Order API for a detailed list of AVS codes.	ccAuthReply	String (1)
ccAuthReply_avsCodeRaw	AVS result code sent directly from the processor. Returned only when the processor returns this value.	ccAuthReply	String (10)
ccAuthReply_cvCode	CVN result code. See Credit Card Services Using the Simple Order API for a detailed list of CVN codes.	ccAuthReply	String (1)
ccAuthReply_cvCodeRaw	CVN result code sent directly from the processor. Returned only when the processor returns this value.	ccAuthReply	String (10)
ccAuthReply_paymentCardService	<p>Mastercard service that was used for the transaction. Mastercard provides this value to CyberSource. Possible value:</p> <p>53: Mastercard card-on-file token service</p> <p>Note This field is returned only for CyberSource through VisaNet.</p>	ccAuthReply	String (2)
<p>1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to CyberSource. CyberSource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment card companies.</p>			

Table 5 Reply Fields (Continued)

Field	Description	Returned By	Data Type & Length
ccAuthReply_ paymentCardService Result	<p>Result of the Mastercard card-on-file token service. Mastercard provides this value to CyberSource.</p> <p>Possible values:</p> <ul style="list-style-type: none"> ■ C: Service completed successfully. ■ F: One of the following: <ul style="list-style-type: none"> ● Incorrect Mastercard POS entry mode. The Mastercard POS entry mode should be 81 for an authorization or authorization reversal. ● Incorrect Mastercard POS entry mode. The Mastercard POS entry mode should be 01 for a tokenized request. ● Token requestor ID is missing or formatted incorrectly. ■ I: One of the following: <ul style="list-style-type: none"> ● Invalid token requestor ID. ● Suspended or deactivated token. ● Invalid token (not in mapping table). ■ T: Invalid combination of token requestor ID and token. ■ U: Expired token. ■ W: Primary account number (PAN) listed in electronic warning bulletin. <p>Note This field is returned only for CyberSource through VisaNet.</p>	ccAuthReply	String (1)
ccAuthReply_ processorResponse	For most processors, this is the error message sent directly from the bank. Returned only when the processor returns this value.	ccAuthReply	String (10)
ccAuthReply_reasonCode	Numeric value corresponding to the result of the credit card authorization request. See Credit Card Services Using the Simple Order API for a detailed list of reason codes.	ccAuthReply	Integer (5)
ccAuthReply_ reconciliationID	Reference number for the transaction. This value is not returned for all processors.	ccAuthReply	String (60)
<p>1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to CyberSource. CyberSource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment card companies.</p>			

Table 5 Reply Fields (Continued)

Field	Description	Returned By	Data Type & Length
ccAuthReply_ transactionQualification	Type of authentication for which the transaction qualifies as determined by the Mastercard authentication service, which confirms the identity of the cardholder. Mastercard provides this value to CyberSource. Possible values: <ul style="list-style-type: none"> ■ 1: Transaction qualifies for Mastercard authentication type 1. ■ 2: Transaction qualifies for Mastercard authentication type 2. <p>Note This field is returned only for CyberSource through VisaNet.</p>	ccAuthReply	String (1)
ccAuthReversalReply_ paymentCardService	Mastercard service that was used for the transaction. Mastercard provides this value to CyberSource. Possible value: <p>53: Mastercard card-on-file token service</p> <p>Note This field is returned only for CyberSource through VisaNet.</p>	ccAuthReversal Reply	String (2)
<p>1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to CyberSource. CyberSource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment card companies.</p>			

Table 5 Reply Fields (Continued)

Field	Description	Returned By	Data Type & Length
ccAuthReversalReply_paymentCardServiceResult	<p>Result of the Mastercard card-on-file token service. Mastercard provides this value to CyberSource. Possible values:</p> <ul style="list-style-type: none"> ■ C: Service completed successfully. ■ F: One of the following: <ul style="list-style-type: none"> ● Incorrect Mastercard POS entry mode. The Mastercard POS entry mode should be 81 for an authorization or authorization reversal. ● Incorrect Mastercard POS entry mode. The Mastercard POS entry mode should be 01 for a tokenized request. ● Token requestor ID is missing or formatted incorrectly. ■ I: One of the following: <ul style="list-style-type: none"> ● Invalid token requestor ID. ● Suspended or deactivated token. ● Invalid token (not in mapping table). ■ T: Invalid combination of token requestor ID and token. ■ U: Expired token. ■ W: Primary account number (PAN) listed in electronic warning bulletin. <p>Note This field is returned only for CyberSource through VisaNet.</p>	ccAuthReversal Reply	String (1)
decision	<p>Summarizes the result of the overall request. Possible values:</p> <ul style="list-style-type: none"> ■ ACCEPT ■ ERROR ■ REJECT ■ REVIEW: Returned only when you use CyberSource Decision Manager. 	ccAuthReply	String (6)
invalidField_0 through invalidField_N	<p>Fields in the request that contained invalid data. For information about missing or invalid fields, see Getting Started with CyberSource Advanced for the Simple Order API.</p>	ccAuthReply	String (100)
<p>1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to CyberSource. CyberSource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment card companies.</p>			

Table 5 Reply Fields (Continued)

Field	Description	Returned By	Data Type & Length
merchantReferenceCode	Order reference or tracking number that you provided in the request. If you included multi-byte characters in this field in the request, the returned value might include corrupted characters.	ccAuthReply	String (50)
missingField_0 through missingField_N	Required fields that were missing from the request. For information about missing or invalid fields, see Getting Started with CyberSource Advanced for the Simple Order API .	ccAuthReply	String (100)
paymentNetworkToken_accountStatus	Possible values: <ul style="list-style-type: none"> ■ N: Nonregulated ■ R: Regulated Note This field is returned only for CyberSource through VisaNet.	ccAuthReply	String (1)
paymentNetworkToken_assuranceLevel	Confidence level of the tokenization. This value is assigned by the token service provider. Note This field is returned only for CyberSource through VisaNet and FDC Nashville Global.	ccAuthReply	String (2)
paymentNetworkToken_originalCardCategory	Mastercard product ID associated with the primary account number (PAN). For the possible values, see "Mastercard Product IDs" in <i>Credit Card Services Using the Simple Order API</i> . CyberSource through VisaNet For the possible values, see "Mastercard Product IDs" in <i>Credit Card Services for CyberSource through VisaNet Using the Simple Order API</i> . Note This field is returned only for Mastercard transactions on CyberSource through VisaNet.	ccAuthReply	String (3)
paymentNetworkToken_requestorID	Value that identifies your business and indicates that the cardholder's account number is tokenized. This value is assigned by the token service provider and is unique within the token service provider's database. This value is returned only if the processor provides it. Note This field is supported only for CyberSource through VisaNet and FDC Nashville Global.	ccAuthService	String (11)
purchaseTotals_currency	Currency used for the order. For the possible values, see the ISO Standard Currency Codes .	ccAuthReply	String (5)
reasonCode	Numeric value corresponding to the result of the overall request. See Credit Card Services Using the Simple Order API for a detailed list of reason codes.	ccAuthReply	Integer (5)

¹ The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to CyberSource. CyberSource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment card companies.

Table 5 Reply Fields (Continued)

Field	Description	Returned By	Data Type & Length
requestID	Identifier for the request generated by the client.	ccAuthReply	String (26)
requestToken	Request token data created by CyberSource for each reply. The field is an encoded string that contains no confidential information such as an account or card verification number. The string can contain a maximum of 256 characters.	ccAuthReply	String (256)
token_expirationMonth	Month in which the token expires. CyberSource includes this field in the reply message when it decrypts the payment blob for the tokenized transaction. Format: MM. Possible values: 01 through 12.	ccAuthReply	String (2)
token_expirationYear	Year in which the token expires. CyberSource includes this field in the reply message when it decrypts the payment blob for the tokenized transaction. Format: YYYY.	ccAuthReply	String (4)
token_prefix	First six digits of token. CyberSource includes this field in the reply message when it decrypts the payment blob for the tokenized transaction.	ccAuthReply	String (6)
token_suffix	Last four digits of token. CyberSource includes this field in the reply message when it decrypts the payment blob for the tokenized transaction.	ccAuthReply	String (4)
<p>1 The TC 33 Capture file contains information about the purchases and refunds that a merchant submits to CyberSource. CyberSource through VisaNet creates the TC 33 Capture file at the end of the day and sends it to the merchant's acquirer, who uses this information to facilitate end-of-day clearing processing with payment card companies.</p>
